FRACTIONAL

Subdivision of T.19 N., R.8 W.

Chains. Survey commenced July 1, 1913 and executed with a Young & Sons light mountain transit No. 10 with a Smith Solar attachment. The horizontal limb being provided with two double verniers placed opposite to each other, reading to single minutes of arc.

I examine the adjustments of the transit and find them correct, and know from recent tests of the solar apparatus by comparing its indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris, that the instrument is in satisfactory adjustment.

All measurements were made with a 5.00 ch. steel tape, with clinometer for determining slope angles.

July 1⁹¹³ At 10⁰³ a.m., l.m.t. I set off 35°04' N. on the lat. arc, 23°08' N. on the decl. arc, and determine a meridian with the solar at the cor. of secs. 1, 2, 35, and 36 on N. bdry. of Tp., which is a malapais stone 8x8x6 ins. above ground, marked and witnessed as described by the surveyor general.

Thence I run,

FRACTIONAL
Subdivision of T 19 N., R 8 W.

General description.

This township contains three classes of land, level, rolling and hilly and the soil varies from an adobe clay loam to almost pure sand. Farming has been attempted in different parts of the township, but it has been found that in practically every instance that irrigation is necessary in order to insure crops. The greater portion of the township is covered with a good growth of bunch grass which furnishes excellent grazing for sheep and cattle. Scattering scrub cedar and juniper is found over the hilly portions of the township. Most of the trees however is too small to be of value for other than firewood. There is no water in the township except that which is stored in reservoirs by the settlers to water sheep and cattle. There are four settlers in the township at the present time, one in sec 6, one in sec 5, one in sec 4, one in sec 8 and one in sec 2.
