Completion of Subdivision of T.12 S., R.9 E.

Chains.

Survey commenced Sept. 25, 1913, and executed with a Young and Son's light mountain transit, No. 8492, with Smith's solar attachment, minute description and tests of which heretofore given in book "E".

In addition to the tests as shown in book "E", at every camp I determine a true meridian from Polaris, checking same by repeated observations, and at every opportunity I test the solar apparatus of the instrument. Therefore knowing from recent and repeated tests that my instrument is in correct adjustment, I proceed as follows:-

At 7h. 30m., a.m., l.m.t., I set off $0^{\circ}44'S.$, on the decl. arc, $32^{\circ}21'N.$ on the lat. arc, and determine a meridian with the solar, at the cor. of secs. 1, 2, 35 & 36, on the S. bdry. of Tp. just re-established by Jesse B. Wright and described in book "A".
