## Partial Subdivision of Township 8 North, Range 10 West. 1.8

Chains.

Survey of the Subdivision lines in this township commenced May 6, 1914, and executed by W.K.Kierulff, U.S. Transitman, using a Young and Sons' light mountain transit No. 8492, and W. H. Thorn, U.S. Surveyor, using a Young and Sons' light mountain transit No. 8592, both of which instruments are described in Book "A" of field notes of this group of surveys.

The initials "W.K.K." and ".H.T." are inserted in the following notes at the beginning and ending of those portions of the notes describing the surveys executed by W.K.Kierulff, U.S. Transitman and W.H.Thorn, U.S. Surveyor, respectively.

W.K.K.

I examine the adjustments of the instrument, and correct the level and collimation errors; then, to test the solar apparatus, May 6, 1914, at 4h. p.m., l.m.t., I set off  $16^{\circ}29\frac{1}{2}'N.$  on the decl.arc;  $34^{\circ}01'N.$  on the lat. arc; and determine a meridian with the solar. I mark the meridian thus determined by a flag set 10.00 chs.N. of my station, which is in sec.21, T.8 N., R.10 W. Lat. $34^{\circ}01'00''N.$ ; long. $113^{\circ}18'8''W.$

May 7, 1914:

At 8h.30m. a.m., l.m.t., I set off  $16^{\circ}43'N.$  on decl.arc;  $34^{\circ}01'N.$  on the lat.arc, and determine a meridian with the solar at a point near camp. The meridian thus determined coincides with the meridian determined by observations on Polaris at Eastern elongation on the morning of May 7, 1914, by W.H.Thorn, U.S. Surveyor. Therefore, I conclude that the adjustments of the instrument are correct.

May 7, 1914.

May 7, 1914:

At 9h. a.m., l.m.t., I set off  $16^{\circ}43'N.$  on the decl.arc;  $33^{\circ}59'N.$  on the lat.arc; and determine a meridian with the solar at the cor.of secs.1,2,35 and 36, on south bdy.of Tp., established by W.H.Thorn, as described in Book "A."

W. K.K.GENERAL DESCRIPTION.

The only part of this township which is of any value for agricultural or grazing is the SE. $\frac{1}{4}$ . Native bunch grass grows along the washes in the SW. $\frac{1}{4}$ . These washes are so numerous and deep that the land through which they run is so stony and rough as to be valueless, agriculturally. The northern part of the township is all mountainous, broken and rough. Good copper prospects have been uncovered in this part. The level part of the township is covered with high greasewood brush and scattering scrub timber. There are no settlers in the township.
