1st Standard Parallel North

6-4817

Executed on dates shown above, by Sidney E. Blout,
U. S. Cadastral Engineer.

Survey commenced July 7, 1919, and executed on the dates shown on the diagram on page 1 hereof, by Sidney E. Blout, U.S. Cadastral Engineer, using a Buff light mountain transit No. 9984, with a Smith solar attachment, the horizontal limb being provided with two double verniers placed opposite to each other, reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs.

For certificate of approval, see Book "A."

All measurements are made with a Lallie 5-chain steel tape, compared with a Chesterman Standard steel tape, and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

Before commencing the survey of this line, I examine the adjustments of the transit, and correct the level and collimation errors; then, to test the solar apparatus, by comparing its indications, resulting from solar observations, made during a.m. and p.m. hours with a meridian established by observations on Polaris, I proceed as follows:

July 7, 1919. At camp near the $\frac{1}{4}$ sec. cor. bet. secs. 15 and 16, T. 5 N., R. 5 E.; latitude, $33^{\circ}46'27''$ N.; longitude $111^{\circ}51'08''$ W., I set off $33^{\circ}46\frac{1}{2}'$ N., on the lat. arc; $22^{\circ}38\frac{1}{2}'$ N. on the decl. arc, and at 4h. 04 $\frac{1}{2}$ m. p.m., l.m.t., determine a meridian with the solar, and mark a point thereof by a nail in a stake driven in the ground about 5-chains N. of instrument.

At 8h. 47. p.m., by my watch, which is correct local mean time, observe Polaris and mark the direction thus determined by a tally pin in stake driven firmly in the ground about 5 chains N. of instrument.

U.C. Polaris July 8, 1919, Meridian of Greenwich, Civil date and mean time,	6h. 31m. a.m.
Reduction to local meridian, subtract,	1.2m.
U.C. Polaris July 8, 1919, local meridian	6h. 29.8m.
Time of obs. July 7, 1919, 8h. 47m. p.m. subtract,	8 47
Hour angle of Polaris at observation,	9 42.8
Azimuth of Polaris at observation,	0° 44.9 E.
	July 7, 1919.

July 8, 1919: At 6h. 30m., a.m., I lay off the azimuth of Polaris, $0^{\circ}44.9''$ to the west, and mark the meridian thus determined by a nail driven in the stake set last evening about 5 chains N. of instrument, on which the meridian falls $0'45''$ E. of the point determined by the solar observation.

At 7h. 4.7m. a.m., l.m.t., set off $33^{\circ}46\frac{1}{2}'$ N., on the lat. arc; $22^{\circ}35'$ N., on the decl. arc, and determine a meridian with the solar and mark a point thereof by a nail in a stake already set about 5 chains N. of instrument. This point falls $01'$ E. of the meridian established by the Polaris observation.

The solar apparatus by p.m. and a.m. observations defines positions for meridians respectively about $0'45''$ W. and $1'$ E. of the meridian established by the Polaris observation; therefore, conclude that the adjustments of the instrument are satisfactory.

GENERAL DESCRIPTION.

This township contains nearly every variety of land from level to mountainous, and the soil ranges from adobe to sandy, clay loam. The soil of the level and rolling portions of the township is generally of a sandy or gravelly clay loam character, capable of producing crops of all kinds with irrigation. The soil of the hilly and mountainous portions of the township, which can nearly all be classed as third and fourth rate is altogether too stony to be of any value for

agricultural purposes. The entire township, however, is covered with a heavy growth of browse and grass of different varieties, which renders the land most valuable for grazing purposes.

Mesquite, palo verde, and ironwood timber is found over the entire township, the trees however, being too small to be of any value, other than for fuel purposes.

No mineral or stone deposits of value were discovered in the township.

The township is poorly watered; in fact, the only source of water supply within this township is that of two wells; at W.O. Brown's ranch in sec. 16, and a well dug by W.W. Moore in sec. 36.

W.O. Brown in sec. 16 is the only bona fide settler on the land in this township.

CERTIFICATE OF UNITED STATES CADASTRAL ENGINEER.

I, Sidney E. Blout, U.S. Cadastral Engineer hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Group 91, Arizona, bearing date of the 26th day of February, 1919, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the NORTH AND EAST BOUNDARIES, and SUBDIVISION LINES of TOWNSHIP 5 NORTH, RANGE 5 EAST, and resurveyed all those parts or portions of the FIRST STANDARD PARALLEL NORTH, THRU. RANGE 5 EAST, of the Gila and Salt River Base and Meridian, in the State of Arizona, which are represented in the foregoing field notes as having been executed by me, and under my direction, and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Group 91, Arizona and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Sidney E. Blout
U.S. Cadastral Engineer.

APPROVAL.
