Retracements, Resurveys and Surveys hereinafter described, executed by William H. Richards, Jr., U.S. Surveyor, on dates shown on page 2 hereof, using Buff solar transit No. 9206, with Smith solar attachment. For description of instrument & certificate of approval, see Book "A." Examine the adjustments of the transit, and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from solar observation made during a.m. and p.m. hours, with a meridian determined by observations on Polaris, proceed as follows:

April 24, 1916. At camp, in the SE. quarter of sec. 26, frac. T.16 N., R.4 E.; lat.  $34^{\circ}45\frac{1}{2}'$  N.; long.  $111^{\circ}53\frac{1}{2}'$  W., at 4n. 10m.. p.m., l.m.t., set off  $34^{\circ}45\frac{1}{2}'$  N. on the lat.arc;  $13^{\circ}1'$  N. on the decl.arc, and determine a meridian with the solar, and mark a point thereof by a nail set in a stake, 5 chs. N.of. station.

At 5h.25m. p.m., l.m.t., by watch, which is set to correct local mean time, observe Polaris at western elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined on a stake 5 chs. N. of station.

April 24, 1916.

April 25, 1916.

At 7h.2m., a.m., l.m.t., lay off the azimuth of Polaris,  $1^{\circ}23\frac{1}{2}'$  to the east, and mark a point in the meridian thus determined by a nail on the stake previously set. Referred to the true meridian thus determined, the solar meridian determined last evening, brs. N. $0^{\circ}0\frac{1}{2}'$  W.

At 7h.7m. a.m., l.m.t., set off  $34^{\circ}45\frac{1}{2}'$  N. on the lat.arc;  $13^{\circ}14'$  N. on the decl.arc, and determine a meridian with the solar. This line referred to the true meridian hereinbefore described, brs. N. $0^{\circ}0\frac{1}{2}'$  W.

The solar apparatus, by a.m. and p.m. observations, defines positions for meridians which depart less than  $1'$  from the true meridian determined by observations on Polaris at elongation; therefore, conclude that the solar is in satisfactory adjustment.

April 25, 1916.

GENERAL DESCRIPTION.

The east tier of secs. in this township lie along the east side of Oak Creek on the west slopes of House Mountain. The general slope and drainage is west and north into Oak Creek. The land is generally mountainous, with the exception of most of sec. 36, the southwest quarter of sec. 25, and about 100 acres in sec. 12, adjacent to the 4th Standard Parallel North, and lying along Oak Creek. These lands are agricultural in character and portions of them are under cultivation.

The north tier of sections is generally rolling, with small patches of prairie, the greater part unfit for cultivation. Oak Creek flows in a narrow canyon, thru. sections 11, 12, 13 and 14,

and very little agricultural land is found, probably a total of 300 acres in the sections mentioned. A heavy growth of cedar and scattering pinyons covered the area surveyed, with the exception of the agricultural lands already described, none of it valuable, except for fire wood.

Good grass is found, and makes this locality good winter pasture.
