Dotted red lines on above diagram indicate surveys executed by Herbert N. Raymond, U. S. Cadastral Engineer, on dates shown thereon.

Blue lines on above diagram indicate surveys executed by Dupree R. Averill, U. S. Translithman, on dates shown thereon.

Survey hereinafter described executed by Herbert N. Raymond, U. S. Cadastral Engineer and Dupree R. Averill, U. S. Transitman, on dates shown on diagram on page 1 hereof, using respectively W. and L. E. Gurley transit "Memo G" and Young and Sons' light mountain transit No. 8541, both of which are described, with certificate of approval, in Book "U".

We examine the adjustments of the transits and correct all errors; then, to test the solar apparatus, by comparing their indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris at elongation, we proceed as follows:

March 24, 1919. At our camp in sec. 26, T. 8 S., R. 14 E., G. and S. R. B. and M., in lat. $32^{\circ}42\frac{1}{2}'N.$, long, $110^{\circ}52'W.$, at 3 hrs. 0 m., p.m., l.m.t., we set off $32^{\circ}42\frac{1}{2}'N.$ on the lat. arcs; $1^{\circ}18'N.$ on the decl. arcs; and determine a meridian with each solar.

At 7 hrs. 21.7 m., p.m., l.m.t., we observe Polaris at western elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determine by a tack in a stake, firmly driven in the ground, 5 chs. N. of our station. We lay off the azimuth of Polaris, $1^{\circ}20'$ to the east, and mark the true meridian thus determined by a tack in a stake, driven firmly in the ground, 5 chs. N. of our station.

Mar. 25, 1919: At 9 hrs. 0 m., l.m.t., we set off $32^{\circ}42\frac{1}{2}'N.$ on the lat. arcs; $1^{\circ}36'N.$ on the decl. arcs; and determine a meridian with each solar.

The solars, by a.m. and p.m. observations, define positions for meridians which coincide with the true meridian determined by observations on Polaris at elongation; therefore we conclude that they are in adjustment.
