FIELD NOTES

OF THE SURVEY OF THE

Seventh Standard Parallel North, through Range 8 West,

and of the

North and West boundaries, and Subdivision lines of

TOWNSHIP 29 NORTH, RANGE 8 WEST.

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Guy Redwine, U. S. Cadastral Engineer, and

Horace M. Muscott, U. S. Transitman,

In the capacity of U. S. Surveyors, under Special Instructions dated February 25, 1920, issued by the United States Surveyor General to govern surveys included in Group No. 106, which were approved by the Commissioner of the General Land Office, March 8, 1920, and Assignment Instructions dated April 8, 1920.

Survey commenced April 25, 1920

Survey completed May 26, 1920

Surveyed under current Group N° 105

Black lines on above diagram indicate surveys executed by Guy Redwine,
U.S.Cadastral Engineer, on dates shown thereon.

Red lines on above diagram indicate surveys executed by Horace M. Muscott,
U.S.Transitman, on dates shown thereon.

Surveys hereinafter described, executed by Guy Redwine, U.S. Cadastral Engineer, and Horace M. Muscott, U.S. Transitman, on dates shown on diagram on page 1 hereof, using Buff and Buff transit No. 9208, and Young and Sons transit No. 8489, respectively. Each instrument is equipped with full vertical circle and the Smith solar attachment; unless otherwise specified all azimuth determinations are accomplished with the solar attachment.

April 23, 1920: We examine the adjustment of each instrument, and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation proceed with each instrument as follows:

At camp near SW.cor. of sec. 14, T. 29 N., R. 8 W., Gila and Salt River Base and Meridian, in latitude $35^{\circ}53\frac{1}{2}'$ N.; and longitude $113^{\circ}07'$ W., at 5h. 21m., p.m., l.m.t., observe Polaris at Western elongation, making four observations, two each with the telescope in direct and reverse positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground 5 chs. N.

Azimuth of Polaris at western elongation, $1^{\circ}23'05''$.

April 24, 1920: Lay off the azimuth of Polaris $1^{\circ}23'$ to the east, and mark the meridian thus determined by a tack in a peg driven firmly in the ground 5 chs. N.

At 9h. 00m. a.m., l.m.t., set off $35^{\circ}53\frac{1}{2}'$ N. on the lat.arc; $12^{\circ}55\frac{1}{2}'$ N. on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat.arc unchanged, observe the sun on the meridian; the resulting reading of the decl.arc is $12^{\circ}58'$ N., which agrees with the computed decl. of the sun.

At 3h. 00m. p.m., l.m.t., with the latitude arc unchanged, set off $13^{\circ}00\frac{1}{2}'$ N. on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1'30''$ of the true meridian, conclude that the adjustments of instrument are satisfactory.

Unless otherwise specified, all measurements are made with Lufkin 5 chain steel tapes, compared with a Lufkin Standard steel tape, and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

Survey of Seventh Standard Parallel North thru Range 8 West.

Chains.

The standard cor. of Ts. 29 N., Rs. 7 and 8 W. on 7th. Std. Parallel North, established under current Group No. 105, is an iron post 3 ins. in diam., projecting 12 ins. above ground, firmly set, properly marked on brass cap, witnessed by two properly marked bearing trees as follows:

A pine, 8 ins. in diam., N. $50\frac{1}{2}^{\circ}$ E., 60 lks. dist.
A pine, 18 ins. in diam., N. 53° W., 287 lks. dist.

Thence,

West, on S. bdy. of sec. 36.

Over level land, thru. scattering timber and undergrowth. Leave level, and enter rolling land. Desc. 102 ft., over W. slope.

16.70 Gully, course S. Asc. 80 ft., over E. slope..

22.10 Spur, slopes S. 30° E. Desc. 65 ft., over SW. slope, to40.00 Set an iron post, 3 ft. long, 1 in. in diam., 24 ins. in the ground, for standard $\frac{1}{4}$ sec. cor. of sec. 36, marked on brass cap,

56 Township 29 North. Range 8 West.

The continued satisfactory adjustment of the solar apparatus during the survey of this township is indicated from field tests, as described in Book "B."

GENERAL DESCRIPTION.

This township lies entirely within the Hualpai Indian Reservation, near the left or East upper rim of the Colorado River Canyon. The surface varies from level to mountainous. Most of the area in the East range of secs. drains easterly into Laguna Valley, which drains northerly in to the Colorado River, thru Mo-hawk canyon.

Parts of secs. 34, 35 and 36 drain southerly into the Verde River watershed. Sec. 31, and parts of secs. 30 and 32 drain southwesterly into Diamond Creek canyon, which drains southwesterly into the Colorado River. Sec. 6 drains northwesterly directly into the Colorado River. The remainder of the township drains into Prospect Valley, which heads in sec. 30, and drains northerly into the Colorado River, near north boundary of T. 32 N., R. 7 W.

The bottom of Prospect Valley is broad, and has a nearly level surface. A mesa about $\frac{1}{2}$ mile wide and 3 miles long, bearing N. and S., thru the eastern part is nearly level, and the same character of surface is found in a draw to the west of the mesa, and in scattered areas in the east range of secs. The area west of Prospect Valley is mostly mountainous, while that to the east is rolling.

The soil in bottom of Prospect Valley, and in the eastern part is gravelly clay, 2nd and 3rd rate. The soil in the remainder of the township is gravelly and rocky clay, 3rd and 4th rate.

The timber, consisting of cedar, pine and oak, is scattering in most of the east and south halves of the township and dense in the west range and north tier of secs., and scattered areas elsewhere. A portion of the southwestern part of the township is devoid of timber.

The undergrowth, consisting of chamisal, scrub oak, sage brush, scrub cedar and manzanita, is scattering in the bottom of Prospect Valley, and most the eastern and southern parts of the township, and dense elsewhere, with the exception of a few scattered small areas, which are devoid of undergrowth.

There is a fair growth of grass in bottom of Prospect Valley, and in the eastern part of the township.

There is no permanent running water in the township, but there is a spring known as "Hocky Pock Spring" near the N. bd. of sec. 6. A number of reservoirs for periodical storing of water are constructed by means of dams in washes, and draws in various parts of the township.

There is no visible evidence of valuable mineral deposits.

There are no permanent residents, but there is a periodical occupation of a ranch at the head of Prospect Valley, where there are improvements consisting of cabins, fences and reservoirs.

A road traverses the entire length of the bottom of Prospect Valley, and another road from Seligman, Arizona passes thru the east half of the township, and connects with the valley road in sec. 3.
