# FIELD NOTES

OF THE SURVEY OF THE

East  $\frac{1}{2}$  miles of the Seventh Standard Parallel North, in Range 9 West,  
the East  $\frac{1}{2}$  mile of the North boundary, and a portion of the Subdivision lines of

TOWNSHIP 29 NORTH, RANGE 9 WEST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Guy Redwine, U. S. Cadastral Engineer, and

Horace M. Muscott, U. S. Transitman,

In the capacity of U. S. Surveyor, under Special Instructions dated February 25, 1920,  
issued by the United States Surveyor General to govern surveys included in Group  
No. 106, which were approved by the Commissioner of the General Land  
Office, March 8, 1920, and Assignment Instructions dated April 8, 1920

Survey commenced May 17, 1920

Survey completed June 11, 1920

## DATE DIAGRAM

TOWNSHIP 29 NORTH, RANGE 9 WEST.

Black lines on above diagram indicate surveys executed by  
Guy Redwine, U. S. Cadastral Engineer, on dates shown thereon.

Red lines on above diagram indicate surveys executed by  
Horace M. Mascott, U. S. Transitman, on dates shown thereon.

Surveys hereinafter described, executed by Guy Redwine, U.S. Cadastral Engineer, and Horace M. Muscott, U.S. Transitman, on dates shown on diagram on page 2 hereof, using respectively, Buff solar transit No. 9208, and Young and Sons mountain transit No. 8489. Each instrument is equipped with full vertical circle, and the Smith solar attachment; unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

May 15, 1920: We examine the adjustment of each instrument and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation, proceed with each instrument as follows:

At camp, in SE. $\frac{1}{4}$  of sec. 19, T. 29 N., R. 8 W., Gila and Salt River Base and Meridian, Arizona, in latitude,  $35^{\circ} 53' N.$ , and longitude,  $113^{\circ} 10\frac{1}{2}' W.$  at 9h. 58m. p.m., l.m.t., observe Polaris at lower culmination, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the meridian thus determined by a tack in a peg driven firmly in the ground, 5 chs. N.

May 16, 1920. At 9h. 00m. a.m., l.m.t., set off  $35^{\circ} 53' N.$ , in the lat.arc;  $19^{\circ} 08\frac{1}{2}' N.$  on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat.arc unchanged, observe the sun on the meridian; the resulting reading of the decl. arc is  $19^{\circ} 10' N.$ , which agrees with the computed declination of the sun.

At 3h. 00m., p.m., l.m.t., with the lat.arc unchanged, set off  $19^{\circ} 12' N.$  on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations made with both instruments during the usual hours of the solar work come within  $1'30''$  of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

-----  
Unless otherwise specified, all measurements are made with Lufkin steel tapes, 5 chs. in length, compared with Lufkin standard steel tape, and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to the true horizontal distances.

GENERAL DESCRIPTION.

The portion of T. 29 N., R. 9 W., surveyed as described in the foregoing field notes includes practically all of the surveyable area in said Tp. lying East of the Colorado River Canyon, the left upper rim of which extends N. and S. thru. secs. 22, 27, and 34 and NE. and SW. thru. secs. 1, 2, 11, 14 and 15. The surface is rolling, broken and mountainous. Secs. 35 and 36, and parts of secs. 25, 26 and 34 drain into Diamond Creek canyon, course S. thru. the eastern part of T. 28 N., R. 9 W. Secs. 13 and 24, and parts of secs. 12 and 25 drain into Prospect Valley, course NE, thru. the W. half of T. 29 N., R. 8 W. The remainder of the surveyed area drains North, directly into Colorado River Canyon. The soil is mostly a rocky clay, 4th rate. The timber, consists of pine, cedar and oak in dense and scattering growths. A dense undergrowth of sagebrush, chamisal, scrub oak, and manzanita is prevalent in all sections. There is no grass, and no permanent running water. There are no settlers, improvements, roads or evidence of valuable mineral deposits. The surveyed portion of this township is in the Hualpai Indian Reservation.
