FIELD NOTES

OF THE SURVEY OF THE

East, boundary,

North boundary,

Part of the West boundary, (completion), and

Part of the Subdivision lines (completion)

of

TOWNSHIP 27 NORTH, RANGE 14 WEST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William B. Kimmel, U.S. Cadastral Engineer,

Quintin Campbell, U.S. Surveyor, and

Francis R. Ihrie, U.S. Transitman,

In the capacity of U.S. Surveyors, under instructions dated February 27, 1920, issued by the United States Surveyor General to govern surveys included in Group No. 110, Ariz which were approved by the Commissioner of the General Land Office, March 10, 1920, and Assignment Instructions dated April 2, 1921, and May 2, 1921.

Survey commenced April 30, 1921.

Survey completed June 14, 1921.

Green lines indicate surveys executed by William B. Kimmel,
U. S. Cadastral Engineer on dates shown thereon.

Red lines indicate surveys executed by Quintin Campbell, U. S.
Surveyor on dates shown thereon.

Blue lines indicate surveys executed by Francis R. Ihrie, U. S.
Transitman on dates shown thereon.

Black lines indicate accepted surveys.

Surveys hereinafter described were executed by William B. Kimmel, U. S. Cadastral Engineer, Quintin Campbell, U. S. Surveyor and Francis R. Ihrie, U. S. Transitman, on dates shown on diagram on page 1 hereof, using respectively Young and Sons' light mountain transits Nos. 8540, 8491 and 8477. For description of instruments 8491 and 8477, and certificates of approval, see Book "A". Transit No. 8540 is similar in all respects to transits 8491 and 8477.

Instrument No. 8540 was approved for field work, conditionally upon satisfactory field tests, by the Assistant Supervisor of Surveys for Arizona and California, May 2, 1921.

TEST OF INSTRUMENTS Nos. 8491 and 8477.

We examine the adjustments of the transits and correct all errors; then, to test the solar apparatus, by comparing their indications, resulting from solar observations made during a. m., and p. m. hours, with a meridian determined by observations on Polaris at elongation, we proceed as follows:

April 25, 1921: at our camp near the center of sec. 36, T. 27 N., R. 14 W., G. and S. R. B. and M., lat. $35^{\circ} 41\frac{1}{2}'$ N., long $113^{\circ} 44'$ W., at 3 hrs. 0 m., p. m., l. m. t., we set off $35^{\circ} 41\frac{1}{2}'$ N. on the lat. arcs; $13^{\circ} 15'$ N. on the decl. arcs, and determine a meridian with each instrument.

April 26, 1921: at 5 hrs. 19 m., a. m., l. m. t., we observe Polaris at eastern elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined by a tack in a stake, firmly driven in the ground, 5 chs. N. of our station.

At 7 hrs. 30 m., a. m., l. m. t., we lay off the azimuth of Polaris, $1^{\circ} 22\frac{1}{2}'$ to the West, and mark the true meridian thus determined by a tack driven in a stake, firmly set in the ground, 5 chs. N. of our station.

At 8 hrs. 0 m., a. m., l. m. t., we set off $35^{\circ} 41\frac{1}{2}'$ N., on the lat. arcs; $13^{\circ} 29'$ N., on the decl. arcs; and determine a meridian with each solar.

As all of the solar observations during the usual hours of solar work come within $1' 30''$ of the true meridian, we conclude that the adjustments of the solars are satisfactory.

TEST OF INSTRUMENT No. 8540.

April 29, 1921: at our camp, near the center of sec. 36, T. 27 N., R. 14 W., G. and S. R. B. and M., lat. $35^{\circ} 41\frac{1}{2}'$ N., long. $113^{\circ} 44'$ W., using the meridian determined as hereinbefore described, at 9 hrs. 0 m., a. m., l. m. t., I set off $35^{\circ} 41\frac{1}{2}'$ N. on the lat. arc; $14^{\circ} 26\frac{1}{2}'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, with the lat. arc unchanged, I observe the sun on the meridian; the resulting decl. is $14^{\circ} 29'$ N., which is the computed decl. of the sun.

At 3 hrs. 0 m., p. m., l. m. t., with the lat. arc unchanged, I set off $14^{\circ} 31\frac{1}{2}'$ N., on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1' 30''$ of the true meridian, I conclude that the adjustments of the solar are satisfactory.

Unless otherwise specified, all measurements are made with a Lufkin steel tape, 5 chs. in length, compared with a Chesterman standard steel tape and found correct. The measurements are made on the slope, the vertical angles determined and the slope measurements properly reduced to true horizontal distances.

Completion of the Survey of the West Boundary of
T. 27 N., R. 14 W.

Chains Those portions of the Boundaries and subdivision of T. 27 N., R. 14 W., surveyed under Group 45 were executed by S. Frank Walters, U. S. Transitman, in July, 1917, and monumented by iron posts, which are the cor. hereinafter described.

The closing cor. of secs. 25 and 30, on the W. bdy. of Tp. and on the Hualpai Indian Reservation Boundary is an iron post, 2 ins. diam., set in a mound of stone, properly marked, witnessed by a mound of stone, S. of cor., and established 42.92 chs. N. of the cor. of secs. 25, 30, 31 and 36. On that part of the brass cap referring to the areas lying within the Hualpai Indian Reservation, I add the section numbers **S 25** and **S 30**, and below the original date 1917, I add the year number 1921. I also efface the letters C C on the brass cap.

on the N. bdy. of Tp. From this flag, measure a base
S. $89^{\circ} 59'$ W., 5.00 chs. to "A" and 8.00 chs. to "B".
From the 52.15 ch. point, flag "A" brs. N. $9^{\circ} 58'$ W.,
and flag "B" brs. N. $15^{\circ} 43'$ W. In the first triangle,
the three angles are $9^{\circ} 57'$, $80^{\circ} 3'$, and 90° , the sum of
which is 180° . In the
second triangle, the
three angles are $15^{\circ} 42'$,
 $74^{\circ} 28'$ and 90° , the
sum of which is 180° .
In the first triangle,
the distance triangu-
lated is given by cot.
 $9^{\circ} 57' \times 5.00$ chs. =
 $5.70037 \times 5.00 = 28.50$
chs. In the second
triangle the distance
triangulated is given
by cot. $15^{\circ} 42' \times 8.00$
= $3.55761 \times 8.00 = 28.46$
The mean of these two

From E. end of base, flag at N. point on last triangulation brs. S. $14^{\circ} 58'$ W. The three angles of the triangle are 15° , $92^{\circ} 57\frac{1}{2}'$ and $72^{\circ} 2\frac{1}{2}'$, the sum of which is 180° . The distance triangulated is given by the sine proportion:

$$\begin{aligned} \frac{x}{17.26} &= \frac{\sin. 72^{\circ} 2\frac{1}{2}'}{\sin. 15^{\circ}} \\ \log. 17.26 &= 1.237041 \\ \log. \sin. 72^{\circ} 2\frac{1}{2}' &= 9.978288 \\ &\quad 1.215349 \\ \log. \sin. 15^{\circ} &= 9.412996 \\ \log. x &= 1.802353 \\ x &= 63.44 \text{ chs.} \end{aligned}$$

which added to 14.30 chs., gives 77.74 chs.

The continued satisfactory adjustment of the solars during the survey of this township is indicated from field tests as described in Book "C" and "D."

GENERAL DESCRIPTION.

The eastern and north central portions of this township are mountainous land; the remainder is rolling land. Practically all the township is covered with a heavy or scattering growth of juniper, cedar and pinyon timber and sagebrush, scrub oak, manzanita, prickly ash, rabbit brush and cactus undergrowth. Merriwhitica Canyon heads in this township.

There are no settlers in the township. One spring, known as Cottonwood Spring, is found near the cor. of secs. 2, 3, 10 and 11. There are no indications of valuable mineral deposits.
