FIELD NOTES

OF THE SURVEY OF

Part of the Subdivision lines (Completion)

of

TOWNSHIP 28 NORTH, RANGE 15 WEST.

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William B. Kimmel, U.S. Cadastral Engineer,

and

Francis R. Ihrie, U.S. Transitman.

In the capacity of U. S. Surveyor ^s, under instructions dated February 27, 1920,
issued by the United States Surveyor General to govern surveys included in
Group Nol10, Ariz., which were approved by the Commissioner of the General Land
Office, March 10, 1920, and Assignment Instructions, dated
April 2, 1921, and May 2, 1921.

Survey commenced June 24, 1921.

Survey completed July 20, 1921.

For dates of survey of this line, see
Book "C" of this Group.

Red lines indicate surveys executed by William B. Kimmel,
U. S. Cadastral Engineer on dates shown thereon.

Blue lines indicate surveys executed by Francis R. Ihrie,
U. S. Transitman on dates shown thereon.

Black lines indicate accepted surveys.

For dates of survey of this line, see Book "D" of this Group.

Surveys hereinafter described were executed by William B. Kimmel, U. S. Cadastral Engineer and Francis R. Ihrie, U. S. Transitman, on dates shown on diagram on page 1 hereof, using respectively Young and Sons' light mountain transits Nos. 8540 and 8477. For description of instruments and certificates of approval, see Books "A" and "B".

We examine the adjustments of the transits and correct all errors; then, to test the solar apparatus, by comparing their indications, resulting from solar observations made during a. m. and p. m. hours, with a meridian determined by observations on Polaris at elongation, we proceed as follows:

June 24, 1921: at our camp in sec. 27, T. 28 N., R. 14 W., lat. $35^{\circ} 47\frac{1}{2}'$ N., long. $113^{\circ} 46'$ W., at 1 hr., 27.6 m., a. m., l. m. t., we observe Polaris at eastern elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined by a tack in a stake, firmly set in the ground, 5 chs. N. of our station.

Field Test of Instrument No. 8540.

June 25, 1921: at 8 hrs. 0 m., a. m., l. m. t., I lay off the azimuth of Polaris, $1^{\circ} 23'$ to the west, and mark the true meridian thus determined by a tack in a stake, firmly driven in the ground, 5 chs. N. of my station.

At 9 hrs. 0 m., a. m., l. m. t., I set off $35^{\circ} 47\frac{1}{2}'$ N. on the lat. arc; $23^{\circ} 24\frac{1}{2}'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, with the lat. arc unchanged, I observe the sun on the meridian; the resulting decl. is $23^{\circ} 24'$ N., which is the computed decl. of the sun.

At 3 hrs. 0 m., p. m., l. m. t., with the lat. arc unchanged, I set off $23^{\circ} 24'$ N. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1' 30''$ of the true meridian, I conclude that the adjustments of the solar are satisfactory.

Field Test of Instrument No. 8477.

June 26: using the meridian determined as above described, at 9 hrs. 0 m., a. m., l. m. t., I set off $35^{\circ} 47\frac{1}{2}'$ N. on the lat. arc; $23^{\circ} 22\frac{1}{2}'$ N. on the decl. arc; and determine a meridian with the solar which agrees with the true meridian.

At apparent noon, with the lat. arc unchanged, I observe the sun on the meridian; the resulting decl. is $23^{\circ} 22'$ N., which is the computed decl. of the sun.

At 3 hrs. 0 m., p. m., l. m. t., with the lat. arc unchanged, I set off $23^{\circ} 22'$ N. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1' 30''$ of the true meridian, I conclude that the adjustments of the solar are satisfactory.

Unless otherwise specified, all measurements are made with a Lufkin steel tape, 5 chs. in length, compared with a Chesterman standard steel tape and found correct. The measurements are made on the slope, the vertical angles determined and the slope measurements properly reduced to true horizontal distances.

P.C.K. 8563

Completion of the Survey of the Subdivision
of T. 28 N., R. 15 W.

Chains	<p>That portion of T. 28 N., R. 15 W., lying outside the Hualpai Indian Reservation was surveyed in 1916 and 1917 under Group 45, Arizona, by E. J. Lange, U. S. Surveyor, and S. Frank Walters and James C. Hooper, U. S. Transitmen, who established the closing cor. on the Hualpai Indian Reservation Boundary from which this survey is initiated.</p> <p>From the cor. of secs. 1, 2, 35 and 36, on the S. bdy. of Tp., described in Book "C". The continued satisfactory adjustment of the solar during the survey of this township is indicated from field tests as described in Book "F".

GENERAL DESCRIPTION.

The portion of T. 28 N., R. 15 W., subdivided under this group is rolling and gently rolling land, covered with a scrubby growth of cedar, pinyon, juniper and pine timber, and buck brush, scrub oak, sagebrush, rabbit brush, Spanish dagger and cactus undergrowth. The soil is rocky, 4th rate.

Water is found at Horse-Flat Tank. No indications of mineral were observed. There are no settlers. A road runs from Clay Springs in a northerly direction through the township.
