OF THE SURVEY OF THE

Seventh Standard Parallel North, thru. parts of Rgs. 13 and 14 west,

Part of the East boundary, and

Part of the Subdivision lines

of

TOWNSHIP 29 NORTH, RANGE 14 WEST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William B. Kimmel, U.S. Cadastral Engineer,

and

Francis R. Ihrie, U.S. Transitman.

In the capacity of U.S. Surveyor, under instructions dated February 27, 1920,
 issued by the United States Surveyor General to govern surveys included in
 Group No. 110, which were approved by the Commissioner of the General Land
 Office, March 10, 1920, and Assignment Instructions, dated
 April 2, 1921 and May 2, 1921.

Survey commenced July 18, 1921

Survey completed August 3, 1921.

Surveys hereinafter described were executed by William B. Kimmel, U.S. Cadastral Engineer and Francis R. Ihrie, U.S. Transitman, on dates shown on diagram on page 1 hereof, using respectively Young and Sons' light mountain transits Nos. 8540 and 8477. For description of instruments and certificates of approval, see Books "A" and "B."

We examine the adjustments of the transits and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris at elongation, we proceed as follows:

July 16, 1921: At 11h.57.8m.p.m., l.m.t., at our camp in sec. 20, T.29 N., R.14 W., lat.: $25^{\circ}53'N.$; long. $113^{\circ}48\frac{1}{2}'W.$, we observe Polaris at eastern elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined by a tack in a stake firmly driven in the ground, 5 chs.N. of our station.

July 17, 1921: At 8h.0m.a.m., l.m.t., we lay off the azimuth of Polaris, $1^{\circ}23'$ to the West, and mark the true meridian thus determined by a tack in a stake firmly driven in the ground, 5 chs.N. of our station.

At 9h.0m., a.m., l.m.t., we set off $35^{\circ}53'N.$ on the lat. arcs; $21^{\circ}14'N.$ on the decl. arcs, and determine a meridian with each solar, which agrees with the true meridian.

At apparent noon, with the lat. arcs unchanged, we observe the sun on the meridian with each solar; the resulting decl. in each case is $21^{\circ}12\frac{1}{2}'N.$, which is the computed decl. of the sun.

At 3h.0m.p.m., l.m.t., with the lat. arcs unchanged, we set off $21^{\circ}11\frac{1}{2}'N.$ on the decl. arcs; and determine a meridian with each solar, which agrees with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1'30''$ of the true meridian we conclude that the adjustments of the solars are satisfactory.

Unless otherwise specified, all measurements are made with a Lufkin steel tape, 5 chs. in length, compared with a Chesterman standard steel tape, and found correct. The measurements are made on the slope, the vertical angles determined, and the slope measurements properly reduced to true horizontal distances.

The true point for standard $\frac{1}{4}$ sec.cor. falls in bottom of canyon, and no witness cor. can be established within prescribed distance. Proceed to a point on the standard on the South side of canyon, from which flag "A"

brs. N. $42^{\circ}32' W$. By computation, flag "A" is 26.17 chs. North of the standard line, and 42.86 chs. East of the true point for standard cor. of secs. of secs. 31 and 32.

The easting from flag "A" to the transit point is given by cot. $47^{\circ}28'$ x $26.17 = .91740 \times 26.17 = 24.01$ chs., which added to 42.86 chs., gives

In the triangle "ABC" the three angles are 40° 30', 45° 55' and 93° 35', the sum of which is 180°. The distance triangulated is given by the sine proportion.

$$\frac{X}{97.21} = \frac{\sin. 93^{\circ} 35'}{\sin. 40^{\circ} 30'}$$

$$\log. 97.21 \text{ chs.} = 1.987711$$

$$\log. \sin. 40^{\circ} 30' = 9.812544$$

$$\log. X. = 2.174317$$

X = 149.39 chs., which added to 75.28 chs. gives 224.67 chs. or 64.67 chs. East of the true point for standard cor. of secs. 33 and 34.

Chains.

From the true point for standard cor. of Ts.29 N., Rs.13 and 14 W. (inaccessible), East, on S. bdy. of sec.31. Over mountainous land, thru. scattering timber and dense undergrowth. As this line cannot be chained to an intersection with the East bdy. of T.28 N., R.14 W., I determine the distance to this bdy., and the length of the East bdy. of sec.1, T.28 N., R.14 W., in the following manner: From a point "A," on the Seventh Standard Parallel North, 1.27 chs. East of the std.cor. of secs. 35 and 36, R.14 W., flag "B" on the E. bdy. of T.28 N., R.14 W., 10.17 chs. N.of the cor. of secs.1,6,7 and 12, brs.S.56°54'E. Also, from "C" the witness cor. to standard cor. of Ts. 29 N., Rs.13 and 14 W., flag "B," brs.S.21°52'E. In the triangle "ABC", point "C," is 78.73 chs. East, and 4.03 chs. N.of point "A." The bearing and length of "AC" are therefore N.87°4'10"E., 78.83 chs. The three angles of the triangle are therefore 108°56'10", 35°2' and 36°1'50", the sum of which is 180°00'. The length BC is determined from the sine proportion.

$$\frac{BC}{78.83} = \frac{\sin. 36^{\circ}1'50''}{\sin. 35^{\circ}2'}$$

$$\log. 78.83 = 1.896692$$

$$\log. \sin. 36^{\circ}1'50'' = 9.769537$$

$$1.666229$$

$$\log. \sin. 35^{\circ}2' = 9.758952$$

$$\log. BC = 1.907277$$

BC = 80.78 chs. The latitude and departure of this line are therefore 74.97 chs. N. & 30.09 chs. W. The closing dist. from the true pt. for std.cor. of Ts.29 N., Rs.13 & 14 W. to true pt. for 2C.C. of T.28 N.R.14 W. is therefore 30.09 chs., and the length of the E. bdy. of sec.1, T.28 N., R.14 W. is given by 10.17 + 74.97 - 4.03 = 81.11 chs. A witness cor. to closing cor. of T.28 N., R.14 W. set 52.61 chs. N.of the cor. of secs. 1,6, 7 and 12, is described in the field notes of current Group No.109.

Final Field Test of Instrument No. 8540.

I examine the transit and find it in correct adjustment; then, to test the solar apparatus by comparing its indications resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris at elongation, I proceed as follows:

August 1, 1921: At our camp in sec. 20, T. 29 N., R. 14 W., lat. 35° 53' N., long. 113° 48½' W., at 3h. 0m. p.m., 1.m.t., I set off 35° 53' N. on the lat.arc; 18° 00' N. on the decl. arc, and determine a meridian with the solar, which agrees with the meridian determined as hereinbefore described.

August 2, 1921: At 9h. 0m., a.m., 1.m.t., I set off 35° 53' N. on the lat.arc; 17° 48½' N. on the decl.arc, and determine a meridian with the solar, which agrees with the meridian determined as hereinbefore described. As all of the solar observations during the usual hours of solar work come within 1'30" of the true meridian, I conclude that the solar has been in satisfactory adjustment during the progress of this survey.

during a.m. and p.m. hours with a meridian determined by observations on Polaris at elongation, I proceed as follows:

August 3, 1921: At our camp in sec. 20, T. 29 N. R. 14 W.; lat. $35^{\circ}53'N.$; long. $113^{\circ}48\frac{1}{2}'W.$, at 3h.0m. p.m., l.m.t., I set off $35^{\circ}53'N.$ on the lat.arc; $17^{\circ}29'N.$ on the decl.arc, and determine a meridian with the solar, which agrees with the meridian determined as hereinbefore described.

August 4, 1921: At 9h.0m., a.m., l.m.t., I set off $35^{\circ}53'N.$ on the lat.arc; $17^{\circ}17'N.$ on the decl.arc, and determine a meridian with the solar, which agrees with the meridian determined as hereinbefore described. As all of the solar observations during the usual hours of solar work come within $1'30''$ of the true meridian, I conclude that the solar has been in satisfactory adjustment during prthe progress of this survey.

GENERAL DESCRIPTION.

The portion of T. 29 N., R. 14 W. surveyed at this time consists of rolling and mountainous land, ending on three sides in precipitous impassable descents into the canyons tributary to the Grand Canyon of the Colorado River. The soil is rocky, 4th rate, supporting a dense or scattering growth of cedar, juniper, pinyon and pine, timber and buck brush, catclaw, scrub oak and cactus undergrowth. The drainage is to the north and east.

No traces of mineral were observed.

A road constructed for surveying purposes leads south westerly from sec. 21 to Clay Springs.
