FIELD NOTES

OF THE SURVEY OF THE

West boundary, and

Subdivision lines

of

TOWNSHIP 3 SOUTH, RANGE 29 EAST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William H. Thorn, U.S. Cadastral Engineer,

and

Benjamin J. Kinsey, U.S. Transitman,

In the capacity of U. S. Surveyors, under Special Instructions dated May 12, 1921

issued by the United States Surveyor General to govern surveys included in Group

No. III, which were approved by the Commissioner of the General Land

Office, May 17, 1921, and Assignment Instructions dated November 17, 1920.

Survey commenced June 6, 1921.

Survey completed July 10, 1921.

Accepted survey

Solid red lines on above diagram indicate surveys executed by William H. Thorn, U.S.Cadastral Engineer, on dates shown thereon.Solid black lines on above diagram indicate surveys executed by Benjamin J. Kinsey, U.S.Transitman, on dates shown thereon.

Surveys hereinafter described, executed by William H. Thorn, U.S. Cadastral Engineer, and Benjamin J. Kinsey, U.S. Transitman, on dates shown on diagram on page 1 hereof, using Young and Sons light mountain transits Nos. 8592 and 8477, respectively. Each instrument is equipped with full vertical circle and the Smith solar attachment. Unless otherwise specified, all azimuth determinations are accomplished with the solar attachments.

We examine the adjustment of each instrument and correct all errors; then, to test the solar apparatus, by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation, we proceed with each instrument as follows:

June 5, 1921: In camp at Garfield, in N. $\frac{1}{2}$ of sec. 33, T. 3 S., R. 29 E., Gila and Salt River Base and Meridian, Arizona, in latitude $33^{\circ}07\frac{1}{2}'$ N., long. $109^{\circ}21'$ W. at 2h. 40.5m.a.m., l.m.t., observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 5 chs. N.

Azimuth of Polaris at eastern elongation = $1^{\circ}20'14''$.

At 8h.0m., a.m., l.m.t., lay off the azimuth of Polaris, $1^{\circ}20'$ to the west, and mark the meridian thus determined by a tack in a peg driven firmly in the ground, 5 chs. N.

At 9h.0m. a.m., l.m.t., set off $33^{\circ}7\frac{1}{2}'$ N. on the lat.arc; $22^{\circ}32\frac{1}{2}'$ N. on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, with the lat.arc unchanged, observe the sun on the meridian; the resulting reading of the decl.arc is $22^{\circ}33\frac{1}{2}'$ N., which agrees with the computed declination of the sun.

At 3h.0m., p.m., l.m.t., with the lat. arc unchanged, set off $22^{\circ}34\frac{1}{2}'$ N. on the decl.arc, and determine a meridian with solar, which agrees with the true meridian.

As all of the solar observations made with both instruments during the usual hours of solar work come within $1'30''$ of the true meridian, we conclude that the adjustment of the instruments is satisfactory.

Unless otherwise specified, all measurements are made with Lufkin steel tapes, each 5 chs. in length, compared with a Chesterman standard steel tape, and found correct. The measurements are made on the slope, the vertical angles determined with clinometers, and the slope measurements properly reduced to true horizontal distances.

Survey of West boundary of Township 3 South, Range 29 East. 3

Chains.	From the cor. of Ts. 2 and 3 S., Rs. 28 and 29 E., described in Book "I," South, on a random line, thru. T. 3 S., between Ranges 28 and 29 E.
40.00	Set temp. $\frac{1}{4}$ sec.cor. of secs. 1 and 6.
53.60	Triangulation point.
56.26	North, or right rim of canyon, brs. E. and W. Beyond this point, the range line passes over a deep canyon, course W., the walls of which are too precipitous to permit chaining; therefore, triangulate measurement across the canyon by triangulation, as described as follows, and as shown on the diagram hereon:
	From 53.60 ch. station, indicated on diagram at "A," measure a Base S.74°30' E., 10.00 chs. to point "B," at rim of canyon. Set flag ahead on range line at point "C," at top of cliffs on the S. wall of canyon. Vertical angle from "A" to "C" = - 7°. Bearing of "B-C" = S.22°58' W. Included angles of triangle "A-B-C" are 74°30', 82°32' and 22°58', the sum of which is 180°00'. Triangulated measurement of "A-C" is obtained by
	$\frac{\sin 82^\circ 32' \times \text{Base}}{\sin 22^\circ 58'} \text{ or } \frac{.99152 \times 10.00}{.39020} = 25.41 \text{ chs.}, \text{ which added to } 53.60 \text{ chs.}, \text{ gives } 79.01 \text{ chs. South from the Tp. cor. for the position of triangulation point "C."}$
79.01	Triangulation point. Continue line and measurement by chaining.
80.00	Set temp.cor. of secs. 1, 6, 7 and 12. Continue line and measurement, setting temp. $\frac{1}{4}$ sec. and sec.cors. alternately at intervals of 40.00 chs., and at
479.66	Intersect the N. bdy. of T. 4 S., R. 29 E. at 80.94 chs. W. from cor. of secs. 5, 6, 31 and 32, and 34.04 chs. E. from point for closing cor. (NW.cor.) of T. 4 S., R. 29 E., both of which cors. are described in Book "H." At the point of intersection, Set an iron post, 3 ft. long, 3 ins. in diam., 26 ins. in the ground, for cor. of Ts. 3 S., Rs. 28 and 29 E., marked on brass cap,
	T3S R28 E R29 E S36 S31 S 6 T4S R29 E 1921
	and raise a mound of stone, 3 ft. base, 2 ft. high, N. of cor.
	Thence, North, on true line, bet. secs. 31 and 36. Over mountainous land, thru. scattering timber and dense undergrowth.
2.20	Descend 56 ft., over NW. slope. Head of gully, course W.
10.28	Ascend 125 ft., over SW. slope. Trail, brs. NW. and SE.
12.30	Spur, slopes W.
18.55	Descend 318 ft., over N. slope. Trail, brs. NW. and SE.
*21.75	Trail, brs. NW. and SE.

10 Survey of Subdivision lines of Township 3 South, Range 29 East.

	Chains.
	From the true point for cor. of secs. 1, 2, 35 and 36, on the S. bdy. of Tp., witnessed 0.70 chs. West by an iron post, as described in Book "H," N. 0° 1' W., bet. secs. 35 and 36. Over mountainous land, thru. scattering timber, and dense undergrowth. Descend over precipitous NE. slope. The south half of this section line passes over very precipitous slopes, and chaining is therefore impracticable; therefore, triangulate as described as follows and as shown on the diagram hereon:
	From a point indicated on diagram at "A" which is 0.34 chs. S. 0° 1' E. from the true point for cor. of secs. 1, 2, 35 and 36, line in a flag N. 0° 1' W. at point "B." From point "B," measure a base S. 89° 59' W., 10.00 chs. to point "C," from which a flag at point "A." bears S. 14° 4' E. Included angles of triangle "A-B-C" are 14° 3', 90° 00' and 75° 57', the sum of which is 180° 00'. Triangulated measurement of "A-B" is therefore obtained by Tang. 75° 57' x Base or $3.99592 \times 10.00 = 39.96$ chs. The distance from the sec.cor. point to triangulation point "B," is therefore 39.96 chs. - 0.34 chs. = 39.62 chs. The approximate positions of the topographical features on the sec.line within the triangulated interval are as follows:
10.00	Head of gulch, course NE. about 150 ft. below the sec.cor. point. Thence over precipitous broken E. slope, to
34.00	Bottom of Colorado Gulch, course SE. Heads about 8 chs. NW. from this point. A vacant shack brs. NW. about 2.00 chs. dist.
39.62	Ascend over precipitous S. slope, to Triangulation point about 415 ft. above the point for cor. of secs. 1, 2, 35 and 36 on S. bdy. of Tp. Continue line and measurement by chaining.
40.00	Ascend 15 ft., over S. slope, to Set an iron post, 3 ft. long, 1 in. in diam., 24 ins. in the ground, for $\frac{1}{4}$ sec.cor., marked on brass cap,

58.41	Descend 127 ft., over S. slope. Trail, brs. NW. and SE.
77.26	Wash, 20 lks. wide, in gulch, course W. Ascend 85 ft., over N. slope.
79.76	Spur, slopes W. Descend 396 ft., over S. slope. Wash in gulch, course W. Trail, brs. E. and W. Ascend 96 ft., over NW. slope, to The cor. of secs. 5, 6, 7 and 8, on point of spur, sloping W. Land, mountainous. Soil, rocky, 4th rate. Timber, scattering pine, cedar, juniper, fir and oak. Undergrowth, dense manzanita, ironwood, scrub oak and cacti.

The continued satisfactory adjustment of the solar apparatus during the survey of this township is indicated from the field tests described in Books "K" and "L".

GENERAL DESCRIPTION.

This township is situated in Greenlee county, Arizona, about five miles northwest from Clifton, the county seat. The surface is mountainous, the greater part draining east and south into the San Francisco River. The west range of sections drains west into Eagle Creek. The highest point in elevation is the top of Enebro Mt. in sec. 17, 7600 ft. The soil in all parts is rocky, 4th rate. The north two tiers of secs., secs. 17, 18, 19 and 30, and the west halves of secs. 16 and 31 are within the Apache National Forest Reserve. There is a scattering growth of juniper, pine, cedar and oak timber in all sections, and a dense undergrowth of scrub oak, manzanita, ironwood and cacti. None of the water courses carry a permanent flow of water, but there are permanent springs in various parts of the township. The south two tiers of sections are highly mineral in character, as indicated by about one hundred patented mining claims, the output of which is copper. The mining town of Garfield in sec. 33 was uninhabited at the time of this survey, owing to the fact that the mines were temporarily idle as a result of a general depression in the copper mining industry. A group of buildings in secs. 5 and 8 constitutes a summer resort, known as Granville. There are about a dozen settlers living in the township at the present time. The Springerville-Clifton State Highway passes N. and S. thru. the township, following Chase Creek.
