OF THE RESURVEY OF THE

East boundary,

AND OF THE SURVEY OF THE

South boundary,

North boundary, and

Subdivision lines of

TOWNSHIP 13 SOUTH, RANGE 8 EAST.

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William H. Thorn, U.S. Cadastral Engineer,

and

Charles E. Hunter, U.S. Transitman.

In the capacity of U. S. Surveyor's, under Special Instructions dated September 25, 1919,  
issued by the United States Surveyor General to govern surveys included in Group  
No. 100, Arizona, which were approved by the Commissioner of the General Land  
Office, October 22, 1919, and Assignment Instructions dated December 1, 1924.

Resurvey and Survey commenced January 9, 1925.

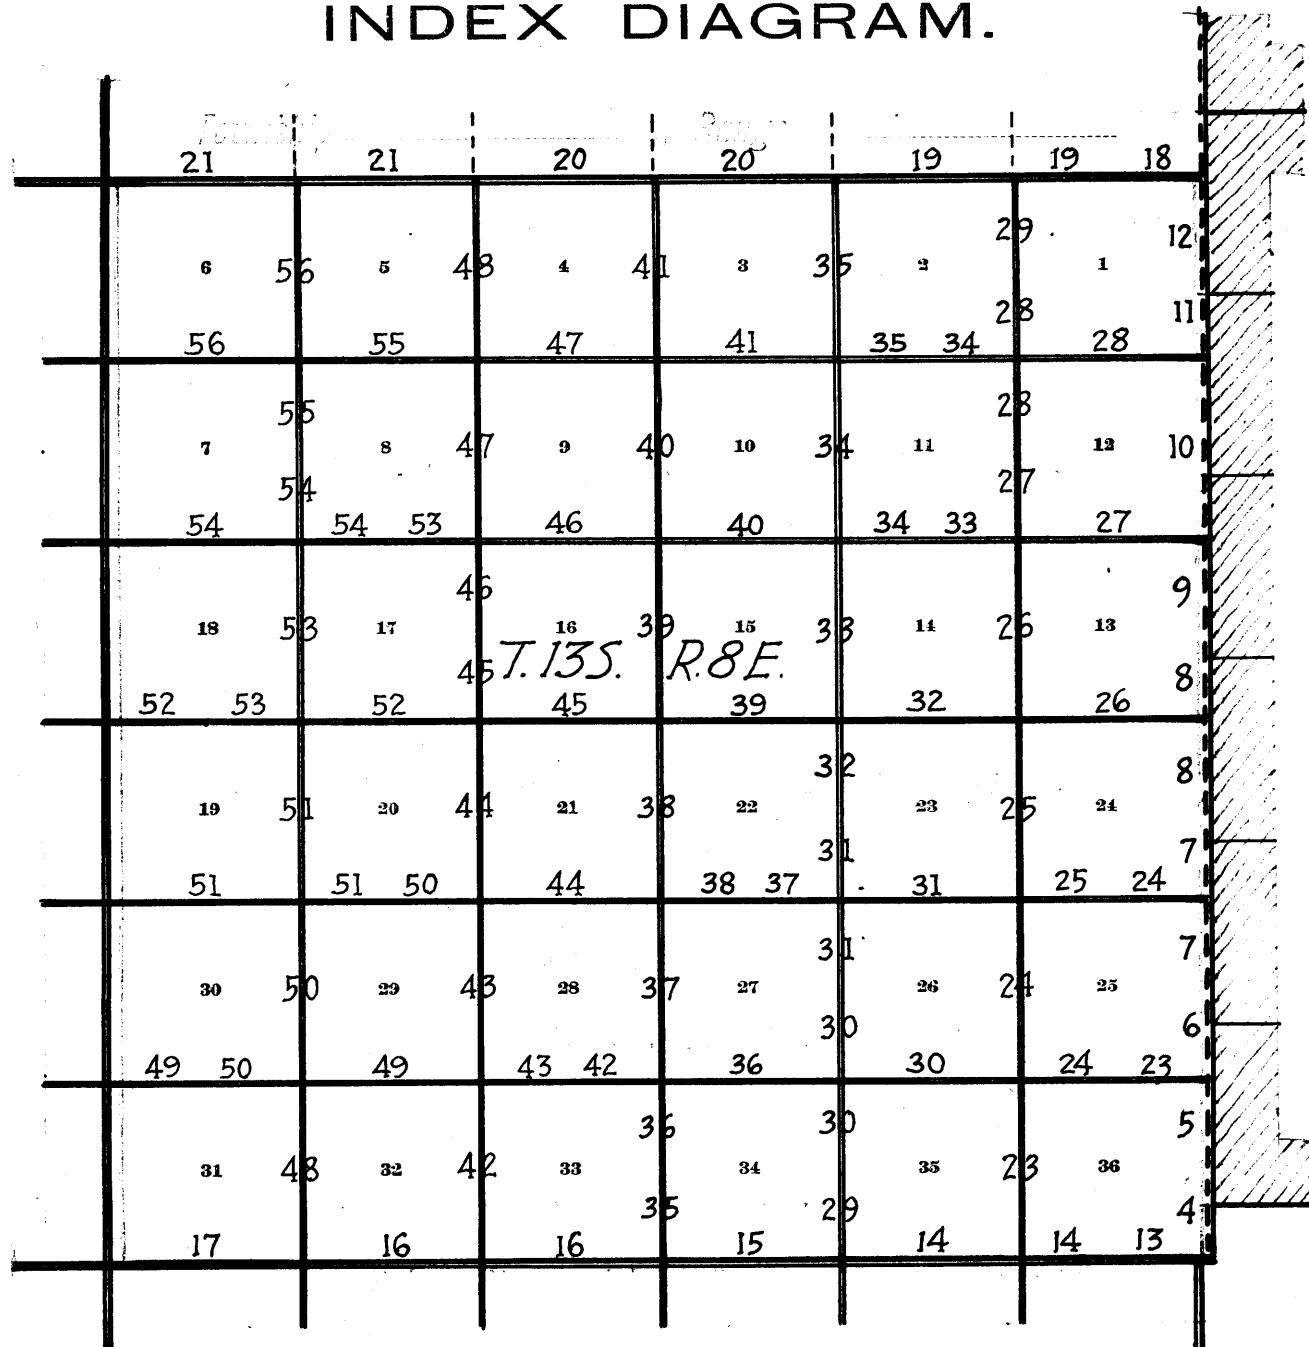

Resurvey and Survey completed February 19, 1925.

Resurveys and surveys hereinafter described were executed on dates shown on diagram on page 1 hereof, by William H. Thorn, U.S.Cadastral Engineer, and Charles E. Hunter, U.S.Transitman, using respectively, Young and Sons Transit No.8592, and Buff and Buff transit No.10125.

FIELD TEST OF YOUNG AND SONS TRANSIT NO.8592, BY WILLIAM H. THORN, U.S.CADASTRAL ENGINEER.

Examine the adjustment of the instrument, and find no errors; then, to test the solar apparatus by comparing its indications resulting from observations made during a.m. and p.m. hours with a meridian established by Polaris observation, proceed as follows:

January 31, 1925: At camp, in the NE.  $\frac{1}{4}$  of sec.1, T.15 S., R.9 E., G. and S.R.B. and M., Arizona, in latitude,  $32^{\circ}9'$   $13''$  N.; longitude,  $111^{\circ}22'39''$  W. at 10 h.45.8m.p.m., l.m.t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, mark the mean point in the line thus determined on a wooden peg driven firmly in the ground 10 chs.N. of the station.

Azimuth of Polaris at western elongation =  $1^{\circ}17'28''$ .

February 1, 1925: At 8h.0m.a.m., l.m.t., lay off the azimuth of Polaris  $1^{\circ}17\frac{1}{2}'$  to the east, and mark the meridian thus determined by a tack in a peg driven firmly in the ground 10 chs. North.

At 9h.0m.a.m., l.m.t., set off  $32^{\circ}9'N.$  on the lat.arc;  $17^{\circ}42'S.$  on the decl.arc, and determine a meridian with the solar.

At 3h.0m.p.m., l.m.t., set off  $32^{\circ}9'N.$  on the lat.arc;  $17^{\circ}2'3.$  on the decl.arc, and determine a meridian with the solar.

As the three meridians agree within 1' of arc, conclude that the instrument is in satisfactory adjustment.

FIELD TEST OF BUFF AND BUFF TRANSIT NO.10125, BY CHARLES E. HUNTER, U. S. TRANSITMAN.

January 4, 1925: Examine the adjustment of the instrument and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by observation on Polaris, Dec.21, 1924, at camp near center of sec.13, T.14 S., R.7 E., as described in Book "F" of this group, proceed as follows:

Jan.4, 1925: At 9h.0m.a.m., l.m.t., set off  $32^{\circ}12\frac{1}{2}'N.$  on the lat.arc; and  $22^{\circ}14'S.$  on the decl.arc, and determine a meridian with the solar.

At app. noon with the lat.arc unchanged, observe the sun on the meridian, obtaining a reading of  $22^{\circ}42'S.$  on the decl.arc, which agrees with the computed decl.of the sun.

At 3h.0m.p.m., l.m.t.; set off  $32^{\circ}12\frac{1}{2}'N.$  on the lat.arc; and  $22^{\circ}40'S.$ , on the decl.arc, and determine a meridian with the solar.

As all of the solar observations made during the usual hours of solar work come within 1' in arc, of the true meridian, conclude that the adjustments of the instruments are satisfactory.

Unless otherwise specified all measurements are made with Lufkin steel tapes 5.00 chs. in length, compared with a Lufkin standard steel tape, and found correct. The measurements are made on the slope, the vertical angles determined with clinometer, and the slope measurements properly reduced to true horizontal distances.

## Resurvey of the East Boundary of T. 13 S., R. 8 E.

**Chains** This township boundary was surveyed by J. B. Wright, U. S. S., in 1913, monumenting all the corners thereon with iron posts with brass caps, with a common reference to areas on both sides of the line. No re-tracement or resurvey of the range line in T. 13 S., is of record.

In view of the fact that the survey of the east boundary of T. 14 S., R. 8 E., as described in book "H" of this group, reestablished the cor. of T. 14 S., Rs. 8 and 9 E., at a point 22.57 chs. S., and 2.20 chs. W. of the original cor. of Ts. 13 and 14 S., Rs. 8 and 9 E., a resurvey of the east boundary of T. 13 S., R. 8 E., is required.

This township boundary is also a part of the boundary of the Papago Indian Reservation, all of T. 13 S., R. 8 E., being within said reservation.

As all of the subdivision lines in T. 13 S., R. 9 E., have been surveyed and accepted, a resurvey of the range line west of said township is dependent upon the alinement between the existing corners thereon. The following notes describe a resurvey of the east boundary of T. 13 S., R. 8 E., reestablishing  $\frac{1}{4}$  sec. and sec. cors. referring to areas in said township, only, alternately at intervals of 40.00 chs. in northing counting from the southeast corner of said township, and altering the existing corner monuments in the line to refer to areas E. thereof, only.

Preliminary to said resurvey make retracement of the west boundary of T. 13 S., R. 9 E., to determine the several bearings and distances between the existing corner monuments thereon, upon which the resurvey is dependent.

N. of  $\frac{1}{4}$  sec. cor. of sec. 1, pending the survey of S. bdy. of T. 13 S., R. 8 E., to establish point of intersection of the two township boundaries.

From this temporary township corner survey random line North and ~~at~~ 22.76 chs. fall 2.20 chs. W. of the original cor. of Ts. 13 and 14 S., Rs. 8 and 9 E., therefore the East bdy. of T. 13 S., R. 8 E., extended S. 22.57 chs. from said original township corner will intersect the south bdy. of same township at 487.06 chs. ## Survey off. the North Boundary of T. 13 S., R. 8 E.

Chains The following notes describe the survey of the N. bdy. of T. 13 S., R. 8 E., monumenting all sec. and  $\frac{1}{4}$  sec. cors. thereon with a common reference to areas on both sides of the line.

The cor. of secs. 1, 2, 35 and 36 is established on the township boundary at point where it is intersected by the sectional guide meridian surveyed due North thru T. 13 S., R. 8 E., as hereinafter described.

The  $\frac{1}{4}$  sec. cor. of secs. 1 and 36 is established on the township boundary at 40.00 chs. E. from the cor. of secs. 1, 2, 35 and 36, and the remaining cors. are established at 40.00 ch. intervals, counting westerly from said sec. cor.

This method of survey places excess measurement in the E.  $\frac{1}{2}$  of line bet. secs. 1 and 36, and W.  $\frac{1}{2}$  of line bet. secs. 6 and 31.

From cor. of Ts. 12 and 13 S., Rs. 7 and 8 E., described in Book "G" of this group.

East, on random line.

44.40 (W.  $\frac{1}{2}$  of line bet. secs. 6 and 31 on S. bdy. of Tp. minus 46 lks. convergancy). Set temp.  $\frac{1}{4}$  sec. cor. of secs. 6 and 31. Continue line and measurement, setting temp. sec. and  $\frac{1}{4}$  sec. cors. alternately at 40.00 ch. intervals.

404.50 Fall 1 lk. S. of the temp. cor. of secs. 1, 2, 35 and 36, set at 480.00 chs. N. of corresponding sec. cor. on the S. bdy. of Township. Continue line and measurement.

444.50 Set temp.  $\frac{1}{4}$  sec. cor. of secs. 1 and 36.

486.71 Fall 15 lks. S. of the reestablished cor. of Ts. 12 and 13 S., R. 8 E., hereinbefore described.

The continued satisfactory adjustment of the solar apparatus of Buff and Buff Transit No. 10125, used by Charles E. Hunter, U.S. Transitman, in the execution of the surveys described in the foregoing notes is indicated from field tests described in Books "L," "M," and "N," of this group.

FINAL FIELD TEST OF YOUNG AND SONS TRANSIT NO. 8592, BY  
WILLIAM H. THORN, U.S. CADASTRAL ENGINEER.

February 18, 1925: Examine the adjustment of the instrument, and find no errors; then, to test the solar apparatus by comparing its indications during a.m. and p.m. hours with the meridian determined by Polaris observation Jan. 31, 1925, at camp in NE quarter of sec. 1, T. 15 S., R. 9 E. as hereinbefore described, proceed as follows:

At 8h.0m., a.m., l.m.t., set off  $32^{\circ}9'N.$  on the lat.arc;  $11^{\circ}37'S.$  on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, with the lat.arc unchanged, observe the sun on the meridian, obtaining a reading of  $11^{\circ}34\frac{1}{2}'S.$  on the decl.arc, which agrees with the computed decl. of the sun.

At 4h.0m.p.m., l.m.t., with the lat.arc unchanged, set off  $11^{\circ}30'S.$  on the decl.arc; and determine a meridian with the solar, which agrees with the true meridian.

The above described tests demonstrate that the instrument has remained in satisfactory adjustment throughout the execution of the resurveys and surveys hereinbefore described.

GENERAL DESCRIPTION.

The surface of the greater part of this township is level or nearly level draining west and southwest. Several small scattered areas in the NE. quarter have a mountainous surface, and in small scattered areas of various parts of the township there is a rolling or gently rolling surface.

The soil over most of the township is sandy and gravelly, 2nd and 3rd rate.

The timber, consisting of palo verde and mesquite is scattering in all sections, and giant cactus is scattered over a large part of the township.

The undergrowth, consisting of greasewood, scrub mesquite, ocotillo and other varieties of cactus is dense in all parts. There is a fair growth of grass which produces an abundant growth during wet seasons.

There are no permanent flowing streams of water and no springs. The only water supply is obtained from two wells, one in NW. quarter of sec. 2, and one in NW. quarter of sec. 11. There are two settlers, one in NW $\frac{1}{4}$  of Sec. 2, name not obtained, and J. Ramono in NW $\frac{1}{4}$  of Sec. 11, and there are some Indians in NW $\frac{1}{4}$  of sec. 16, where they have a small village.

The improvements consist of a house, well and corral in NW $\frac{1}{4}$  of Sec. 2, house, well and corral in NW $\frac{1}{4}$  of Sec. 11, the Indian habitations and a cultivated tract of about 25 acres in NW $\frac{1}{4}$  of sec. 16, where the Indians raise wheat in wet seasons.

There are indications of valuable mineral deposits situated in Secs. 1 and 2. U. S. I. M. No. 2612 is located in NE $\frac{1}{4}$  of sec. 2, near N. bdy. of the Tp.

A number of roads traverse the West and North halves

of the township.

The entire township is within the Papago Indian Reservation, the East and West boundaries forming part of the boundary of said reservation.
