FIELD NOTES

OF THE RESURVEY OF

the 4th Standard Parallel South thru Range 12 East,
and Part of the Subdivision Lines of T.20S., R.12E.

AND OF THE SURVEY OF

Part (completion) of the Subdivision Lines of

Township 20 South ~ Range 12 East

of the Gila and Salt River Base and Meridian,

In the State of ARIZONA

EXECUTED BY

William B. Kimmel

U.S. Cadastral Engineer

In the capacity of U. S. Surveyor, under Special Instructions dated September 24, 1925,
issued by the U.S. District Cadastral Engineer
to govern surveys included in Group
No. 138, Arizona, which were approved by the Commissioner of the General Land
Office, October 14, 1925, and Assignment Instructions dated November 2, 1925.

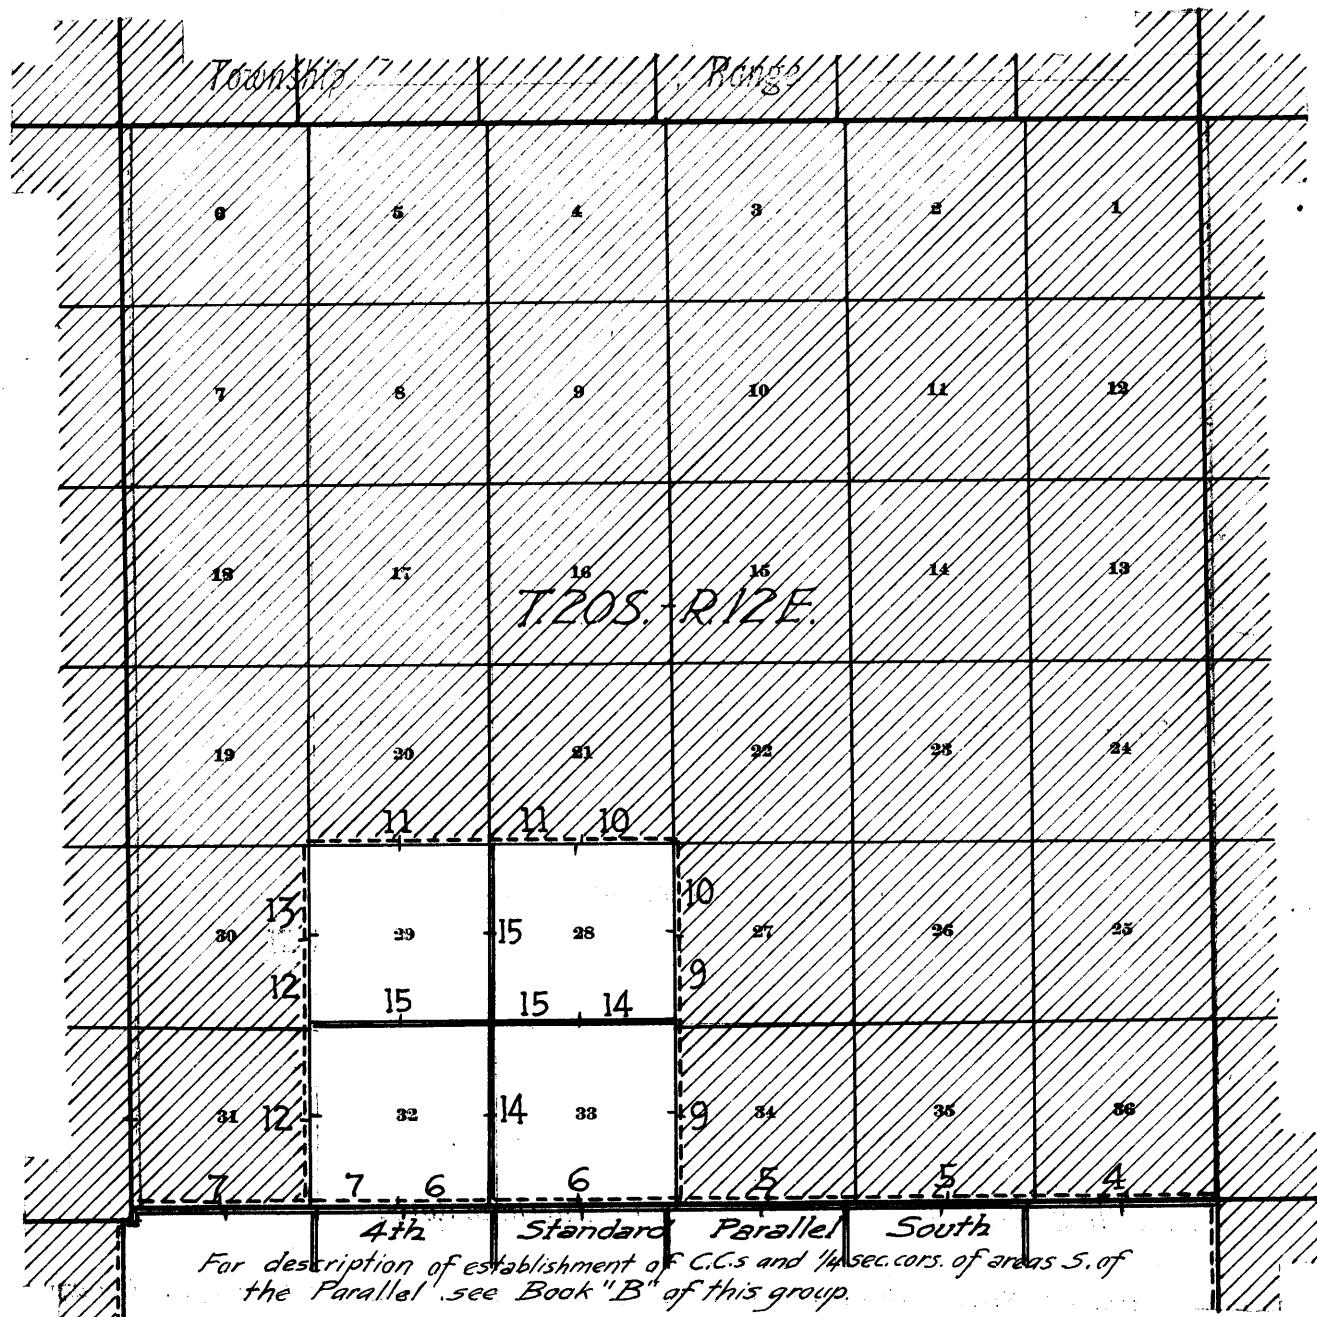

Resurvey and Survey commenced November 15, 1925.

Resurvey and Survey completed December 8, 1925.

1925

Resurveyed by J. P. Davis U.S.G.S. in 1918

Surveyed by W. B. Kimmel, U.S.C.E. on dates shown thereon.

Resurveyed by W. B. Kimmel, U.S.C.E. on dates shown thereon.

Accepted surveys, retracements or resurveys.

In the following, Resurveys and Surveys herein described were executed on dates shown on diagram on page 1, hereof, by Wm. B. Kimmel, U. S. Cadastral Engineer, using J. & L. E. Gurley transit No. 20120, equipped with a full vertical circle and the Smith Solar attachment. The horizontal limb is provided with two double verniers placed opposite to each other reading to 30" of arc. The verniers of the vertical circle and solar attachment read to 1' of arc.

Unless otherwise specified all measurements are made with Lufkin steel tape, 5 chains long, compared with a Lufkin Standard steel tape and found correct. The measurements are made on the slope, the vertical angles determined with transit or clinometer, and the slope measurements properly reduced to true horizontal distances. Unless otherwise specified, all azimuth determinations were accomplished with the solar attachment.

November 10, 1925: At the Western Union Telegraph Office, Tucson, Arizona, set watch to correct standard time, which is 24.4m fast, l.m.t.

November 11, 1925: Examine the adjustments of the transit and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from observations, made during a.m. and p.m. hours with a meridian established by Polaris observation, proceed as follows:

November 11, 1925: At camp in the SW $\frac{1}{4}$ of sec. 23, T. 21 S., R. 12 E., G. & S. R. Base and Meridian, Arizona, latitude $31^{\circ} 35'$ N., longitude $111^{\circ} 5'$ W., make a daylight hour angle observation on Polaris east of the meridian, one each with the telescope in direct and reversed positions, reading the horizontal deflection angle to a point of rock about 5 miles distant.

Local mean time of observation - - - - -	5h. 26.5m.
Mean horizontal angle to rock - - - - -	$13^{\circ} 27.5'$
Azimuth of Polaris - - - - -	$1^{\circ} 13'$
True bearing, Point of rock - - - - -	$N.12^{\circ} 14.5'W.$
Mean vertical angle of Polaris - - - - -	$31^{\circ} 56.5'$
Latitude of station - - - - -	$31^{\circ} 35.5'N.$

November 14, 1925, At 9h a.m., app..t., set off $31^{\circ} 35\frac{1}{2}'$ N. on the lat. arc; $18^{\circ} 14\frac{1}{2}'S.$ on the decl. arc; and determine a meridian with the solar, which agrees within 1' of the true meridian.

At apparent noon, with the lat. arc unchanged, observe the sun on the meridian, the resulting reading of the decl. arc is $18^{\circ} 14'$ S. which agrees with the computed decl. of the sun. Also make a meridian observation of the sun for latitude, observing the sun's center with the transit telescope;

Observed altitude - - - - -	$40^{\circ} 10' 30''$
Refraction - - - - -	$1' 19''$
	<hr/>
	$40^{\circ} 09' 11''$
Sun's declination - - - - -	$18^{\circ} 15' 21''$
	<hr/>
Latitude ($90^{\circ} - 58^{\circ} 24' 32''$) - - -	$31^{\circ} 35' 28''$

At 3h p.m., app.t., with the lat. arc unchanged, set off $18^{\circ} 14\frac{1}{2}'S.$ on the decl. arc; and determine a meridian with the solar, which agrees within 1' of the true meridian.

As all of the solar observations taken during the usual hours of solar work come within 1' of the true meridian, conclude that the adjustments of the instrument is satisfactory.

The instrument was maintained in adjustment throughout the survey.
