FIELD NOTES

OF THE SURVEY OF THE

Boundary of the Papago Indian Reservation
thru

T. 20 S., R. 7 E.

and

T. 21 S., R. 7 E.

of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Benjamin J. Kinsey, U.S. Surveyor

and

Charles E. Hunter, U.S. Transitman

In the capacity of U. S. Surveyors, under Special Instructions dated Sept. 25, 1919,
issued by the United States Surveyor General to govern surveys included in Group
No. 100 Arizona, which were approved by the Commissioner of the General Land
Office, October 22, 1919, and Assignment Instructions dated April 11, 1927.

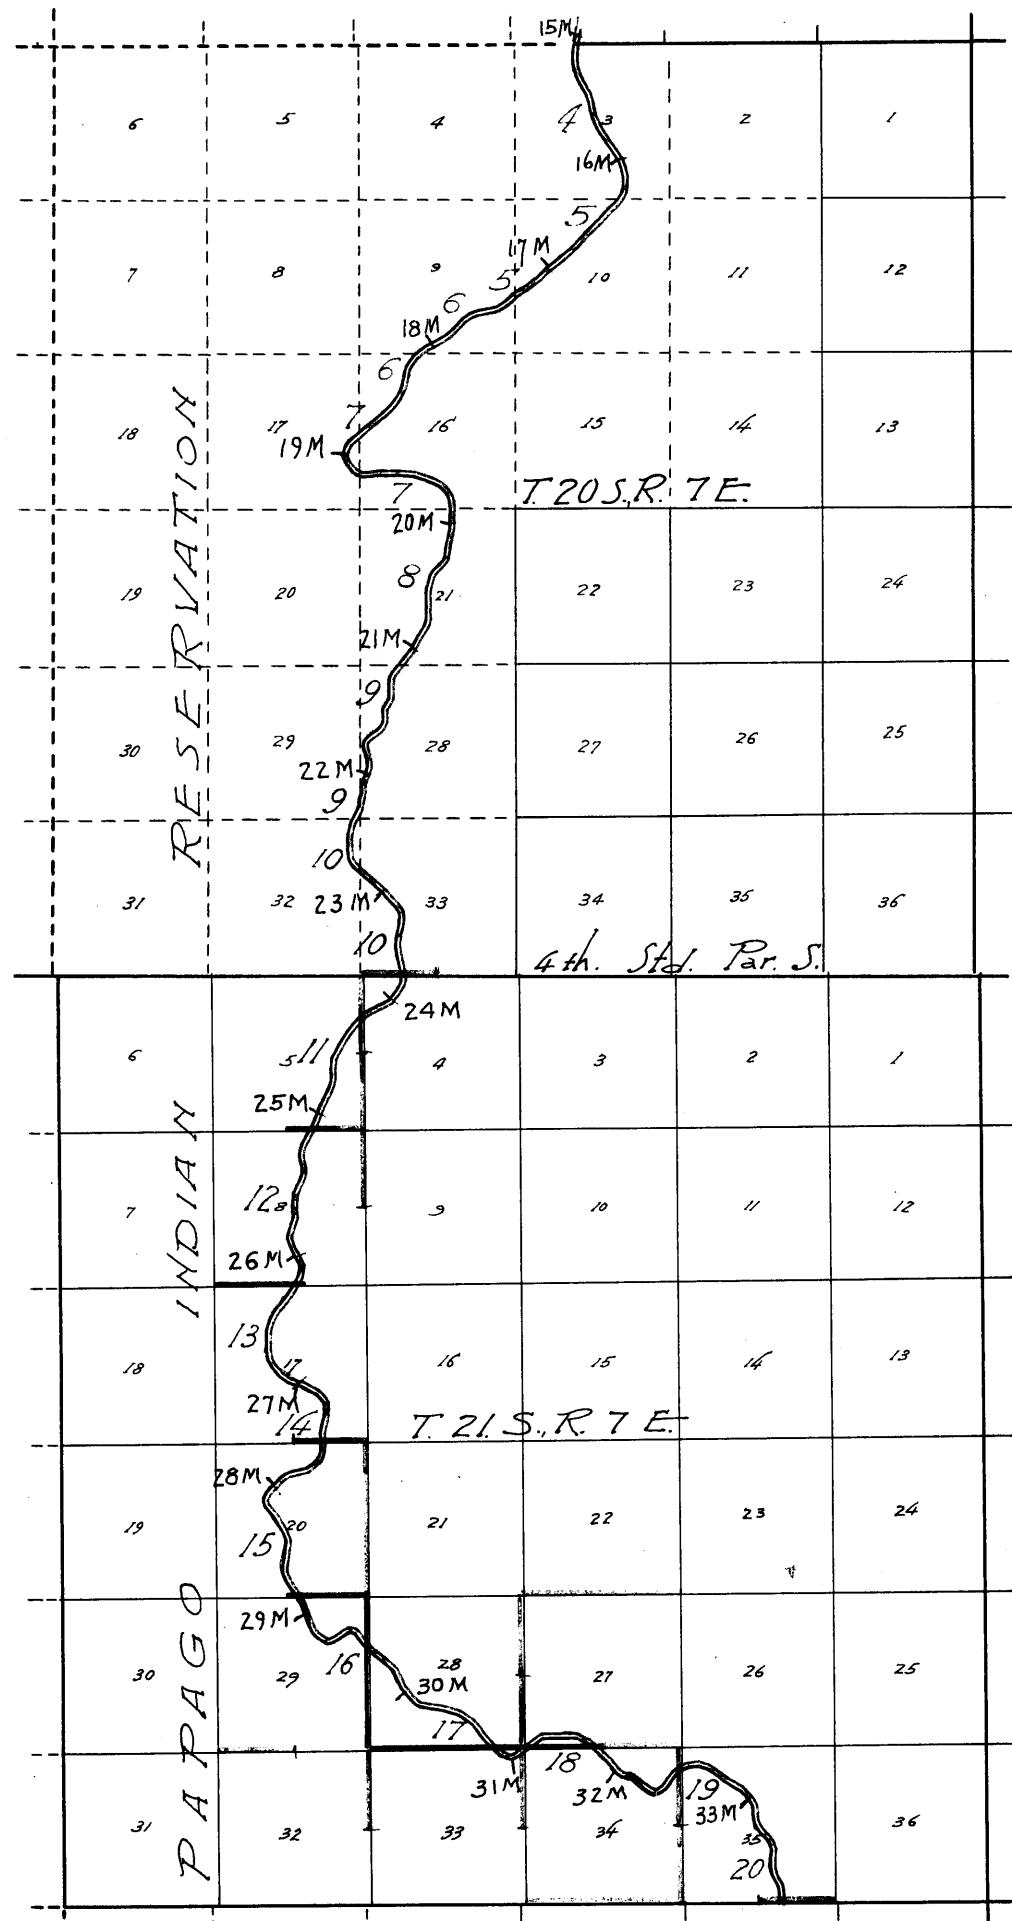

Survey commenced April 16, 1927.

Survey completed May 2, 1927.

DATE-DIAGRAM.

13

Indicates P.I.R. Bdy. surveyed by Benjamin J. Kinsey, U.S. Surveyor on dates shown.

Indicates P.I.R. Bdy. surveyed by Charles E. Hunter, U.S. Transitman, on dates shown.

The surveys herein described were executed by Benjamin J. Kinsey, U.S. Surveyor and Charles E. Hunter, U.S. Transitman, on dates shown on diagram on page 1 hereof, using respectively Buff transits Nos. 9940 and 10125, with U-shaped standards, 4 $\frac{1}{2}$ inch horizontal circles, 4 inch vertical circles and improved Smith solar attachments; all azimuth determinations are accomplished with the solar attachment except the special observations upon Polaris upon which to test the solar apparatus as stated in the field notes.

PRELIMINARY FIELD TEST
of
Buff Transit No. 9940,
by
Benjamin J. Kinsey, U.S. Surveyor.

April, 13, 1927, at my station in camp, near the $\frac{1}{4}$ sec. cor. secs. 35 and 36, T. 21 S., R. 7 E., G. & S.R.B. & M., latitude $31^{\circ}33\frac{1}{2}'$ N., and longitude $111^{\circ}34'43''$ W., examine the adjustments of the transit and find no existing errors; then to test the workings of the solar apparatus proceed as follows:

At 6h.05m., p.m., 1.m.t., observe Polaris at western elongation making four observations, two each with the telescope in direct and reversed positions and marking the mean point in the line thus determined by a tack set in top of a stake driven firmly in the ground about 5 chs. N.

Azimuth of Polaris at western elongation : $1^{\circ}16'$.
April, 15, 1927, lay off the azimuth of Polaris $1^{\circ}16'$ to the east and mark the true meridian by a tack set in top of a peg, driven firmly in the ground about 5 chs. N.

At apparent noon, with the latitude arc set at $31^{\circ}33\frac{1}{2}'$ N., observe the sun on the meridian; the resultant reading of the decl. arc is $9^{\circ}37\frac{1}{2}'$ N., which agrees with the computed decl. of the sun.

At 3h.00m., p.m., with lat. arc unchanged set off $9^{\circ}40\frac{1}{2}'$ N. on the decl. arc and determine a meridian with the solar which agrees with the true meridian.

April, 16, 1927, set off $31^{\circ}33\frac{1}{2}'$ N., on lat. arc, $9^{\circ}56'$ N., on decl. arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations taken during the usual hours of solar work agree within 1' of the true meridian, conclude that the instrument is in satisfactory adjustment.

Unless otherwise specified, all measurements are made with a Lufkin steel tape 5 chs. in length, compared with a Lufkin standard and found correct.

All measurements are made on the slope, the vertical angle determined and the slope measurements properly reduced to horizontal values.

Chains

PRELIMINARY FIELD TEST
of
Buff Transit No.10125.
by
Charles E. Hunter, U.S.Transitman.

April, 17, 1927., at same station as described on page 2 here-
of, examine the adjustments of the transit and find no
existing errors; then to test the workings of the solar
apparatus by comparing its indications with the true
meridian hereinbefore described proceed as follows:

At 9h. 00m., a.m., app. t., set off $31^{\circ}33\frac{1}{2}'N.$, on the
latitude arc, $10^{\circ}18'N.$, on the decl. arc and determine
a meridian with the solar which agrees with the true
meridian.

At 3h. 00m., p.m., app.t., with lat arc unchanged, set
off $10^{\circ}23'N.$, on decl. arc and determine a meridian with
the solar which agrees with the true meridian.

As all of the observations taken during the usual hours
of solar work agree within 1' of the true meridian,
conclude that the adjustments of the instrument is in
satisfactory condition.

Unless otherwise specified all measurements are made with
a Lufkin steel tape 5 chs. in length, compared with a
Lufkin standard and found correct.

All measurements are made on the slope, the vertical
angle determined with a clinometer and the slope meas-
urements properly reduced to horizontal values.

Survey of part of the boundary of the Papago Indian Reservation.
(Along the summit of Baboquivari Mountain Range.)

4

Chains

For the purpose of marking the boundary so it can be readily followed, monument the angle points thereon with small mounds of stone, the minimum size of these mounds being 2 ft. base and 1 ft. high and frequently very much larger.

The closing corner of Ts. 19 and 20 S., R.7 E., established in 1926 by Otis O. Gould, U.S. Transitman, is an iron post 3 ins. in diam., projecting 12 ins. above ground, firmly set, properly mkd. on brass cap and witnessed by two bearing trees, one each NE and SE of corner.

This closing corner is at 2.20 chs. station of 16th. mile of P.I.R. Bdy., which I designate as A.P. No.1.

Thence,

Continuing measurement of 16th. mile of P.I.R. Bdy. in T.20 S., R.7 E.

GENERAL DESCRIPTION.

The portion of the Papago Indian Reservation boundary, lying within Ts. 20 and 21 S., R.7 E., surveyed under this group is at an elevation ranging from 6500 ft. above sea level on the northern end to 4500 ft. on the southern end. The north two miles, in T.20 S., R.7 E., is over rough, broken land, with cliffs in a few places, while the remainder of the miles is over rolling and smooth land.

The predominant forest species are oak and juniper, with a scattering growth..

No water was found along the entire line surveyed.

A good automobile road was crossed near the extreme southern end of the line, leading from the Altar valley on the east to the Baboquivari Valley on the west side of the Baboquivari mountain range..

A wire drift fence is built along the summit of the Baboquivari range thru most of Ts. 20 and 21 S., R.7 E.

Cattle are grazed in large numbers on both sides of the divide, especially on the East.

Boundaries of that part of T.20 S., R. 7 E.,
situate outside the Papago Indian Reservation.
