FIELD NOTES

OF THE SURVEY OF THE

EAST Boundary

and

Subdivision Lines of

Township 36 North, Range 2 East

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Benjamin J. Kinsey, U.S. Surveyor

and

Leroy R. Hanson, U.S. Transitman

In the capacity of U. S. Surveyor, under Special Instructions dated May 11, 1927, issued by the District Cadastral Engineer to govern surveys included in Group No. 146 Arizona, which were approved by the Commissioner of the General Land Office, May 20, 1927, and Assignment Instructions dated April 21, 1928.

Survey commenced June 26, 1928

Survey completed August 4, 1928

Group 146 Arizona

Township 36 North, Range 2 East

DATE DIAGRAM

1928

BOOK 3867

9th Standard Parallel North
Surveyed in 1925 under Group 126

Surveyed under this group. Notes & Dates in Book "D"

Surveyed by Benjamin J. Kinsey, U.S. Surveyor, on dates shown thereon.

Surveyed by Leroy R. Hanson, U.S. Transitman, on dates shown thereon.

The surveys hereinafter described were executed on dates shown on diagram on page 1 hereof, by Benjamin J Kinsey, U.S. Surveyor and Leroy R Hanson, U.S. Transitman, using Buff transit No. 18000 and Young and Sons transit No. 8477. The instruments are equipped with improved Smith solars and otherwise conform to the standard requirements of the General Land Office.

The instruments were examined, tested on the true meridian at the Federal Building at Phoenix Arizona, found correct, and were approved by the District Cadastral Engineer for Arizona and California, conditional upon satisfactory field tests. All azimuth determinations are accomplished with the solar attachment, except the special observations on Polaris and the sun for meridian, upon which to test the solar apparatus, as stated in the field notes.

All measurements are made with Lallie 5-chain steel tapes compared with a Chesterman standard steel tape and found correct. The measurements are made on the slope, the vertical angles determined with clinometers, and the slope measurements properly reduced to true horizontal distances for entry in the field notes.

PRELIMINARY FIELD TEST
of
Buff Transit No. 18000
by
Benjamin J Kinsey, U.S. Surveyor.

June 23, 1928. At camp near the center of sec. 11, T36N., R2E., of the Gila and Salt River Base and Meridian, in latitude $36^{\circ}32' N.N.$, and longitude $112^{\circ}00' W.$; examine the adjustment of the instrument and find no errors, then to test the solar apparatus by comparing its indications, resulting from solar observations made during a.m., and p.m. hours with a meridian determined by observations on Polaris; proceed as follows;

At $1^h 33.8^m$ a.m., l.m.t., observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions and mark the mean point in the line thus determined by a tack in stake driven firmly in the ground about 5.00 chs. N.

Azimuth of Polaris at eastern elongation--= $1^{\circ}21'05'' E.$

June 24, 1928 at $7^h 00^m$ a.m. Standard time lay off the azimuth of Polaris $1^{\circ}21'$ to the west and mark the true meridian thus determined by a tack driven in a stake set firmly in the ground about 5,00 chs. N.

At $8^h 00^m$ a.m., app. time, set off $36^{\circ}32' N.$ on the lat. arc $23^{\circ}25\frac{1}{2}' N.$ on the decl. arc and determine a meridian with the solar which agrees with the true meridian established by the Polaris observations.

At apparent noon, at the same station, with the lat.arc unchanged, observe the sun on the meridian and obtain a reading of $23^{\circ}25'$ N. on the decl.arc which agrees with the computed declination of the sun for this hour.

At $4^{\text{h}}00^{\text{m}}$ p.m., app.time with the lat.arc unchanged; set off $23^{\circ}25\frac{1}{2}'$ N. on the decl.arc and determine a meridian with the solar which falls $\frac{1}{2}'$ W. of the true meridian established by the Polaris observations.

Since all of the solar observations made during the usual hours of solar work define positions for meridians which agree within $1'30''$ with the true meridian determined by the Polaris observations conclude that the adjustments of the instrument are satisfactory.

PRELIMINARY FIELD TEST

of

Young and Sons Transit No.8477

by

Leroy R Hansen, U.S. Transitman.

July 1, 1928. Examine the adjustments of the transit and correct all errors, then to test the solar apparatus by comparing its indications, resulting from solar observations made during a.m. and p.m. hours with a meridian established by observations on Polaris; proceed as follows;

July 1, 1928; In camp in sec.11, T36N., R2E., Gila and Salt River Base and Meridian, Arizona, on the same meridian described on page 2 hereof, At $9^{\text{h}}00^{\text{m}}$ a.m., app time, set off $36^{\circ}32'$ N.E. on the lat. arc $23^{\circ}6\frac{1}{2}'$ N. on the decl.arc and determine a meridian with the solar which agrees with the true meridian.

At apparent noon with the lat.arc unchanged, observe the sun on the meridian, the resulting reading on the decl.arc is $23^{\circ}6'$ N. which agrees with the computed declination of the sun.

At $3^{\text{h}}00^{\text{m}}$ p.m., app.time with the lat.arc unchanged, set off $23^{\circ}5\frac{1}{2}'$ N. on the decl.arc and determine a meridian with the solar which also agrees with the true meridian.

As all the observations made during the usual hours of solar work come within $1'30''$ of the true meridian established by the Polaris observations, conclude that the adjustments of the instrument are satisfactory.

Survey of the East Bdy. of T.36 N., R.2 E

Chains.	From the cor. of Tps. 35 and 36 N., Rs. 2 and 3 E., which is described in Book "D" of this group
6.00	North on true line bet. secs. 31 and 36. Over rolling land, thru scattering undergrowth. Shallow draw course SE.
10.00	Enter scattering timber bears E. and W.
11.50	Ascend 20 ft. over S. slope.
13.00	Top of spur bears E. Descend 20 ft. over N. slope.

FINAL FIELD TEST OF BUFF TRANSIT No.18000

by
Benjamin J. Kinsey U.S. Surveyor.

July 1, 1928; In camp in sec. 11, T36 N., R2E., Gila and Salt River Base and Meridian, Arizona on the same meridian, described on page 2 hereof, at 8^h00^m a.m., app. time, set off 36°32' N. on the lat.arc, 23°07' N. on the decl.arc and determine a meridian with the solar which agrees with the true meridian.

At apparent noon with the lat.arc unchanged, observe the sun on the meridian and obtain a reading on the decl.arc of 23°06' N. which agrees with the computed decl. of the sun for this hour.

At 4^h00^m p.m., app. time with the lat.arc unchanged, set off 23°54' N. on the decl.arc and determine a meridian with the solar which agrees with the true meridian established by the Polaris observation.

Since all of the observations made during the usual hours of solar work define positions for meridians which agree with the meridian established by the Polaris observations, conclude that the instrument has remained in adjustment throughout the survey.

FINAL FIELD TEST OF YOUNG AND SONS TRANSIT NO.8477.

by
Leroy R. Hansen, U.S. Transitman.

August 12, 1928: At a station in camp near the center of sec. 11, T36 N., R2E., of the Gila and Salt River Base and Meridian, Arizona, in latitude 36°32' N. and longitude 112°10' W. at 10^h13.8^m p.m., l.m.t. observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions and mark the mean point in the line thus determined by a tack driven in a stake set firmly in the ground about 5 chains N.

Azimuth of Polaris at eastern elongation = 1°21'00"E.

August 13; lay off the azimuth of Polaris 1°21' to the

west and mark the meridian thus determined by a tack driven in a stake set firmly in the ground about 5-chains N.

At 9^h 00^m a.m., app.time, set off $36^{\circ}32'N.$ on the lat. arc $14^{\circ}37\frac{1}{2}'N.$ on the decl.arc and determine a meridian with the solar which agrees with the true meridian.

At apparent noon with the lat.arc unchanged, observe the sun on the meridian. The decl.arc reads $14^{\circ}35'N.$ which agrees with the computed declination of the sun for this hour.

At 3^h 00^m p.m., app.time with the lat.arc unchanged, set off $14^{\circ}33'N.$ on the decl.arc and determine a meridian with the solar which agrees with the true meridian.

As all of the solar observations made during the usual hours of solar work agree within $1\frac{1}{2}'$ with the true meridian determined by the Polaris observations, conclude that the instrument has remained in adjustment throughout the survey.

GENERAL DESCRIPTION

The land embraced in this township with the exception of that in Pleasant Valley, located in the southeastern part of the township, is all of a rolling mountainous character comprising broad level topped ridges with shallow draws between. and the soil over the entire township with few exceptions, consists of a gravelly loam 2nd. rate in character.

The land is highest in the central and south central portions and slopes in a northeasterly and northwesterly direction of the drainage. The east half of the township is drained in an easterly direction by numerous washes and draws while in the west half the drainage is accomplished by the Ogner and Castle Canyons which have a northwesterly trend.

The township is poorly watered. one spring in sec. 24 being the only permanent living water in the township.

The township is well timbered over its entire area with a heavy growth of pine, fir, spruce, and aspen timber. many of the trees being suitable for lumbering purposes.

The land in this township supports a good growth of grass and other forage plants thus affording excellent pasture for cattle, horses, and other stock during portions of the year when the weather conditions will permit.

A new highway recently constructed from Bright Angel Point on the North rim of the Grand Canyon to the Jacobs Lake Forest ranger station on U.S. Highway No.89 crosses through the township in a northerly direction, which in addition to two other roads which cross through the township from north to south west of the center afford the principal means of vehicular communication.

The only habitations in the township consist of a cabin in each of secs. 11, 16, and 24.

No valuable mineral or stone deposits were found in
the township.

On account of the variety of forage plants and different
grasses which grow on the land the township as
a whole is adapted to stock raising.

CERTIFICATE OF UNITED STATES SURVEYOR.

I, Leroy R. Hanson, U.S. Transitman, hereby certify upon honor that, in pursuance of special instructions received from the District Cadastral Engineer, for Group 146, Arizona bearing date of the 11th day of May, 1927, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of

the Subdivision lines of

Township 36 North, Range 2 East of the Gila and Salt River Base and Meridian, in the State of Arizona, which are represented in and by diagram on page 1 hereof the foregoing field notes as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the District Cadastral Engineer, for Group 146, Arizona and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Place: Phoenix, Arizona.

Date: JAN. 15, 1929.
