

FIELD NOTES

OF THE SURVEY OF THE

West Boundary

The North Boundary

and

The Subdivision Lines

of

TOWNSHIP 5 SOUTH, RANGE 20 EAST

Of the Gila and Salt River Base and Meridian,

In the State of ARIZONA

EXECUTED BY

William E. Hiester, U.S. Surveyor

and

Theodore Vander Meer, U.S. Transitman

In the capacity of U. S. Surveyors, under Special Instructions dated June 23, 1926, issued by the District Cadastral Engineer to govern surveys included in Group No. 141, Arizona, which were approved by the Commissioner of the General Land Office, July 13, 1926, and Assignment Instructions dated Nov. 17, 1928.

Survey commenced January 21, 1929.

Survey completed March 21, 1929.

Surveyed under this group. Notes & dates in Book "B"

SURVEYED by Wm.E.Hiester, U.S.Surveyor, on dates shown thereon in 1929.

SURVEYED by Theodore Vander Meer, U.S.Transitman, on dates shown thereon in 1929.

Surveys herein described were executed on dates shown on diagram on page 1, hereof, by William E. Hiester, U.S. Surveyor, and Theodore Vander Meer, U.S. Transitman, using respectively, Buff & Buff Transits Nos. 19423 and 9977. Both instruments are equipped with full vertical circles and improved Smith solar attachments. The horizontal limbs are provided with two double verniers placed opposite each other reading to single minutes of arc, which is also the least count of the verniers of the vertical circles and of the latitude and declination verniers of the solar attachments. Unless otherwise specified all azimuth determinations were accomplished with the solar attachments.

PRELIMINARY INSTRUMENT TEST

Jan. 26, 1929: examine the adjustments of the instruments and correct all errors; then, to test the solar apparatus by comparing its indications, resulting from observations made during a.m. and p.m. hours with a meridian established by observation on Polaris; proceed as follows:

At 11:07 p.m., l.m.t., at station near the $\frac{1}{4}$ sec. cor. of secs. 29 and 30, T. 5 S., R. 20 E., G. & S. R. B. & M., Arizona, lat. $32^{\circ}58'N.$, long. $110^{\circ}19\frac{1}{2}'W.$, observe Polaris at Western Elongation, making four observations, two each with the telescope in direct and reversed positions, and mark a point on the mean line on a stake driven firmly into the ground about 5 chs. Northerly.

Jan. 27: at 7:30 a.m., lay off the azimuth of Polaris, $1^{\circ}16\frac{1}{2}'$ to the East, and identify a point on a hill about $\frac{1}{4}$ mile S. $63^{\circ}27'E.$ to mark the true meridian.

Exact azimuth of Polaris at elongation = $1^{\circ}16'39''$.

At 9:00 a.m., app.t., set off $32^{\circ}58'N.$ on the lat. arcs, $18^{\circ}26'S.$ on the decl. arcs, and determine meridians with the solar attachments, which agree within $1\frac{1}{2}'$ with the true meridian.

At app. noon, with the lat. arcs unchanged, observe the sun on the meridian; the resultant readings of the decl. arcs are within $\frac{1}{2}'$ of $18^{\circ}24\frac{1}{2}'S.$, the computed declination of the sun.

At 3:00 p.m., app.t., with the lat. arcs unchanged, set off $18^{\circ}22'S.$ on the decl. arcs, and determine meridians with the solar attachments, which agree within $1\frac{1}{2}'$ with the true meridian.

Since the solar apparatus by a.m. and p.m. observations define positions for meridians which agree within $1\frac{1}{2}'$ with the meridian established by observation on Polaris, conclude that the adjustments of the instruments are satisfactory.

All measurements are made with Lallie and Lufkin steel tapes, 5 chs. in length, compared with a Lufkin standard steel tape, 1 ch. in length, and found correct. The measurements are made on the slope, the vertical angles determined with clinometers, and the slope measurements properly reduced to true horizontal distances.

FINAL INSTRUMENT TEST

The continued satisfactory adjustment of solar apparatus is indicated from tests described in beginning of Book "G" of this Group.

GENERAL DESCRIPTION

Township lies between elevations of 3,500 and 7,000 ft. over divide between Gila River and Aravaipa Creek. It is reached by road in the SW. cor. from Klondyke and in the NW. cor. from Stanley Butte. Its industries are mining and grazing, only. Water is plentiful in small springs. There are no permanent settlers.
