East Boundary

North Boundary

and

Subdivision lines

of

Fractional Township 30 North, Range 23 West

and

Meanders of Left Bank of Colorado River

thru

Fractional Township 30 North, Range 23 West

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Dupree R. Averill, U.S. Surveyor

In the capacity of U. S. Surveyor, under Special Instructions dated July 15, 1929, issued by the District Cadastral Engineer to govern surveys included in Group No. 160 Arizona, which were approved by the Commissioner of the General Land Office, August 1, 1929, and Assignment Instructions dated January 29, 1930.

Survey commenced February 28, 1930

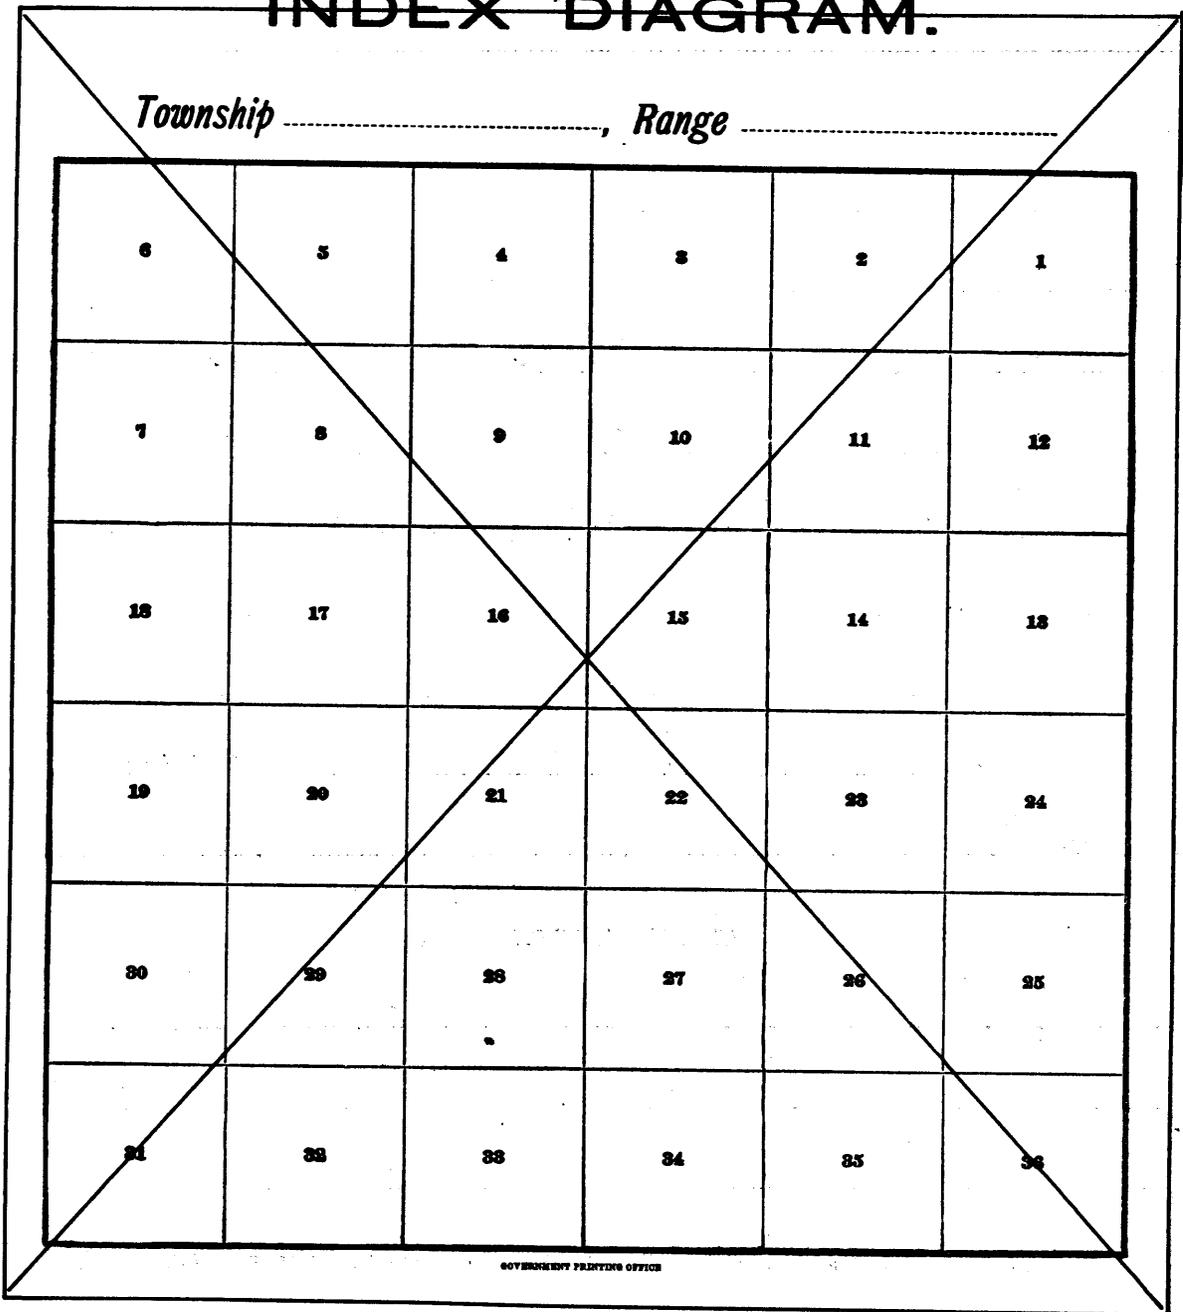

Survey completed April 9, 1930

# INDEX DIAGRAM.

*Township* ..... , *Range* .....

Group 160 Arizona  
INDEX and DATE DIAGRAM

March 8 Lines of Arizona Group No. 160 surveyed by D. R. Averill, U.S. Surveyor in 1930.  
12 Month and day shown in red. Page number of notes in green.

----- Unsurveyed lines in Arizona.

\_\_\_\_\_ Lines of Nevada surveys.

----- Unsurveyed Meanders of Right Bank of Colorado River.

The surveys herein described were executed on dates shown on diagram on page 1 hereof by Dupree R. Averill, U. S. Surveyor, using Buff & Buff solar transit No. 17992, equipped with full vertical circle and the Smith solar attachment. The horizontal limb of the transit is provided with two double verniers placed opposite to each other and reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs. Unless otherwise specified all azimuth determinations are accomplished with the solar attachment.

The instrument was examined, tested and approved by the District Cadastral Engineer for Arizona and California January 29, 1930, conditional upon satisfactory field tests.

-----  
 PRELIMINARY TEST.  
 -----

February 28, 1930:

At camp near center of sec. 25, fractional T. 30 N., R. 23 W., G. & S. R. B. & M., Arizona, latitude  $35^{\circ} 57\frac{1}{2}'$  N., longitude  $114^{\circ} 43'$  W., examine the adjustments of the instrument and find no errors, then, to test the solar apparatus by comparing its indications resulting from solar observations made during a. m. and p. m. hours with a meridian determined by Polaris observations, proceed as follows:

At 8 h. 59 m., p. m., l. m. t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and marking the mean point in the line thus determined by a tack in a stake driven firmly in the ground 10.00 chs. N.

Azimuth of Polaris at western elongation -  $1^{\circ} 19' 5''$ .

March 1, 1930.

At 7 h. 30 m., a. m., lay off the azimuth of Polaris  $1^{\circ} 19'$  to the east and mark a point in the true meridian thus determined by a tack in a stake driven firmly in the ground 10.00 chs. N.

At 8 h. 0 m., a. m., app. t., set off  $35^{\circ} 57\frac{1}{2}'$  N., on the lat. arc,  $7^{\circ} 40'$  S. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian, and obtain a reading of  $7^{\circ} 37'$  S., on the decl. arc, which agrees with the computed declination of the sun.

At 4 h. 0 m., p. m., app. t., with the lat. arc unchanged set off  $7^{\circ} 32'$  S. on the decl. arc, and determine a meridian with the solar, which agrees within 1' with the true meridian.

As all of the solar observations made during the usual hours of solar work define positions for meridian which agree within 1' with the true meridian, conclude that the instrument is in satisfactory adjustment.

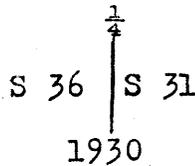

Unless otherwise specified all measurements are made with a Lufkin steel tape 5 chs. in length, compared with a Lufkin standard steel tape and found correct. The measurements are made on the slope, vertical angles determined by clinometer or transit readings, and the slope measurements properly reduced to true horizontal distances for entry in the field notes.

Frac. T, 30 N., R. 23 W.  
GENERAL DESCRIPTION.

Township 30 North, Range 23 West, Arizona, is made fraction-  
al by the Colorado River, the center of which is the common bound-  
ary of the states of Arizona and Nevada.

The township drains westerly into the Colorado River,  
which in this vicinity flows southerly thru Black Canyon, with  
an average water width of about 6 chains.

The surface of the greater part of the township is brok-  
en and mountainous. A portion of the east range of sections has  
a rolling surface.

The soil varies from tertiary gravels to an igneous rock  
formation, 3rd and 4th rate.

There is no timber in the township.

Undergrowth of greasewood, cacti and catclaw in a  
scattering growth, is prevalent in most of the sections.

There are no settlers or improvements, and no roads.

No indications of valuable mineral were observed during  
the survey. The only road is one bearing NW. & SE thru sec. 1.

Except the water of the Colorado River there is no per-  
manent flow of water in any of the water courses, and there are  
no springs in the township, except Hot Springs in Colo. River  
bank in sec. 10.

No portion of the township has agricultural or grazing value.

The Arizona portion of the proposed BOULDER DAM SITE is located in section 3 of this township, and the Nevada portion is located in section 29 of Fractional T. 22 S., R. 65 E., Nevada.

-----  
 FINAL TEST.  
 -----

At the conclusion of the surveys described in the foregoing field notes, which is also the conclusion of the surveys of Group No. 160, Arizona, make a final test of Buff and Buff solar transit No. 17992 as follows:

April 11, 1930:

At camp in approximately the  $SE\frac{1}{4}$  of unsurveyed sec. 29, Frac. T. 29 N., R. 22 W., G. & S. R. B. & M., Arizona, latitude  $35^{\circ} 52' N.$ , longitude  $114^{\circ} 40\frac{1}{2}' W.$ , examine the adjustment of the instrument and find no errors, then, to test the solar apparatus by comparing its indications resulting from solar observations made during a. m. and p. m. hours with a meridian determined by Polaris observations, proceed as follows:

At 6 h. 14 m., p. m., l. m. t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and marking the mean point in the line thus determined by a tack in a stake driven firmly in the ground 10 chs. N.

Azimuth of Polaris at western elongation =  $1^{\circ} 19' 13''$ .

April 13, 1930:

At 3 h. 30 m., p. m., lay off the azimuth of Polaris  $1^{\circ} 19'$  to the east and mark a point in the true meridian thus determined by a tack in a stake driven firmly in the ground 10 chs. N.

At 4 h. 0 m., p. m., app. t., set off  $35^{\circ} 52' N.$  on the lat. arc,  $9^{\circ} 4\frac{1}{2}' N.$  on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

April 14, 1930:

At 7 h. 0 m. a. m., app. t., set off  $35^{\circ} 52' N.$  on the lat arc,  $9^{\circ} 18\frac{1}{2}' N.$  on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

From the results of the above described tests conclude that the instrument has remained in satisfactory adjustment throughout the surveys described in the foregoing field notes.

BOOK 3883

CERTIFICATE OF UNITED STATES SURVEYOR

I, Dupree R. Averill, U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the District Cadastral Engineer, for Group 160, Arizona bearing date of the 15th day of July, 1929, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the

East Boundary

North Boundary

and Subdivision lines of

Fractional Township 30 North, Range 23 West

and Meanders of Left Bank of the Colorado River thru Frac. Township 30 North, Range 23 West of the Gila and Salt

River Base and Meridian, in the State of Arizona, which are represented in the foregoing field notes and by diagram on page 1 hereof as having been executed by me, and under my direction; and that all the corners of

said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the District Cadastral Engineer, for Group 160, Ariz., and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Place:

Date:

Dupree R. Averill U. S. Surveyor. Phoenix, Arizona. May 15, 1930.

APPROVAL

OFFICE OF U. S. SUPERVISOR OF SURVEYS,

Denver, Colo., October 10, 1930.

The foregoing field notes of the survey of the East boundary, North boundary, and Subdivision lines of Fractional Township 30 North, Range 23 West, and the Meanders of the Left Bank of the Colorado River thru Fractional Township 30 North, Range 23 West of the Gila and Salt River Base & Meridian, in the State of Arizona

executed by Dupree R. Averill, U.S. Surveyor

under his special instructions dated July 15, 1929 for Group 160 Arizona, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

M. H. Johnson U. S. Supervisor of Surveys.

I certify that the foregoing transcript of the field notes of the above described surveys in has been correctly copied from the original notes on file in this office.

U. S. Supervisor of Surveys.
