FIELD NOTES

OF THE SURVEY OF THE

EAST Boundary.

NORTH Boundary

and

Subdivision Lines

of

TOWNSHIP 16 NORTH, RANGE 10 WEST

Of the Gila and Salt River Base and Meridian,

In the State of ARIZONA

EXECUTED BY

William E. Hiester, U.S. Surveyor

and

Charles E. Hunter, U.S. Transitman

In the capacity of U. S. Surveyors, under Special Instructions dated June 24, 1929, issued by the District Cadastral Engineer to govern surveys included in Group No. 159, Arizona, which were approved by the Commissioner of the General Land Office, July 10, 1929, and Assignment Instructions dated Jan. 2, 1930.

Survey commenced January 22, 1930.

Survey completed February 13, 1930.

Surveyed by Charles E. Hunter, U.S.T., on dates shown thereon.

Surveyed by William E. Hiester, U.S.S., on dates shown thereon.

Surveyed under this Group, notes in other Books.

Accepted surveys on record in this office.

MOHAVE-YAVAPAI County Boundary.

Unsurveyed.

The surveys herein described were executed on dates shown on diagram page 1 hereof, by William E. Hiester, U.S. Surveyor and Charles E. Hunter, U.S. Transitman, using respectively, Buff Transit No. 19423 and Young & Sons Transits Nos. 8491 and 8584; the instruments are equipped with the improved Smith solar attachment. The horizontal limbs are provided with two double verniers, placed opposite each other and reading to single minutes of arc, which is also the least count of the verniers of the vertical circles, latitude and declination arcs.

The instruments were approved, subject to the usual field tests, by the District Cadastral Engineer for Arizona.

PRELIMINARY TESTS OF INSTRUMENTS.

Examine the adjustments of the instruments and find no errors; then to test the solar apparatus by comparing their indications resulting from solar observations taken during a.m. and p.m., hours with a meridian determined by observations on Polaris, proceed as follows:

January 20, 1930: at camp near the cor. of secs. 29, 30, 31 and 32 of T. 16 N., R. 10 W., G&SR Base Meridian, Arizona, latitude $34^{\circ}41'23''$ N., longitude $113^{\circ}20'17''$ W., at 11h. 34m. p.m., l.m.t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, by a tack driven in a peg set firmly in the ground 5 chs. N.

Azimuth of Polaris at western elongation is $1^{\circ}17'47''$

January 21, 1930: at the same station, lay off the azimuth of Polaris $1^{\circ}18'$ to the east and mark the meridian thus determined by a tack driven in a peg, set firmly in the ground 5 chs. N.

At 8h 00m a.m., app.t., set off $34^{\circ}41\frac{1}{2}'$ N., on the lat. arc, $19^{\circ}54\frac{1}{2}'$ S., on the decl. arc, and determine a meridian with the solar which agrees with the true meridian.

At app.t., noon with the lat. arc unchanged, observe the sun on the meridian; the resultant reading of the decl. arc is $19^{\circ}54\frac{1}{2}'$ S., which agrees with the computed decl. of the sun.

At 4h 00m p.m., app.t., with the lat. arc unchanged, set off $19^{\circ}50\frac{1}{2}'$ S., on the decl. arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations made during the usual hours of solar work come within 1' of the true meridian it is concluded that the adjustments of the instruments are satisfactory.

At intervals throughout the survey the solar instruments were tested on a true meridian, and were maintained in proper adjustment.

FINAL TESTS OF INSTRUMENTS

February 16, 1930: on the meridian hereinbefore described near the cor. of secs. 29, 30, 31 and 32 of T. 16 N., R. 10 W., at 9 a.m., app.t., set off $34^{\circ}41\frac{1}{2}'$ N., on the lat. arc $12^{\circ}23\frac{1}{2}'$ S., on the decl. arc and determine a meridian with the solar, which agrees with the true meridian.

At app.t., noon with the lat.arc unchanged, observe the sun on the meridian; the resultant reading of the decl. arc is $12^{\circ}21'S.$, which agrees with the computed decl. of the sun.

At 3h 00m p.m., app.t., with the lat.arc unchanged, set off $12^{\circ}18'S.$, on the decl.arc and determine a meridian with the solar, which agrees with the true meridian.

PRELIMINARY TEST OF YOUNG & SONS TRANSIT
NO. 8584

February 4, 1930: at station near the $\frac{1}{4}$ sec. cor. of secs. 10 and 11 of T.16 N., R.10 W., G&SR Base Meridian, Arizona, latitude $34^{\circ}44'24''N.$, longitude $113^{\circ}17'05''W.$, at 10h 35m p.m., l.m.t., observe Polaris at western elongation making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, by a tack driven in a peg set firmly in the ground 5 chs.N.

Azimuth of Polaris at western elongation is $1^{\circ}17'46''$

February 5, 1930: at the same station, lay off the azimuth of Polaris $1^{\circ}18'$ to the east and mark the meridian thus determined by a tack driven in a peg, set firmly in the ground 5 chs.N.

At 8h 00m a.m. app.t., set off $34^{\circ}44\frac{1}{2}'N.$, on the lat.arc $15^{\circ}58'S.$, on the decl.arc and determine a meridian with the solar which agrees with the true meridian.

At app.t., noon, with the lat.arc unchanged, observe the sun on the meridian; the resultant reading of the decl. arc is $15^{\circ}56'S.$, which agrees with the computed decl. of the sun.

At 3h 00m p.m., app.t., with the lat.arc unchanged, set off $15^{\circ}53\frac{1}{2}'S.$, on the decl.arc and determine a meridian with the solar which agrees with the true meridian.

At intervals throughout the survey the instrument was tested on a true meridian and was maintained in proper adjustment.

FINAL TEST OF INSTRUMENT.

February 22, 1930: on the meridian determined February 5, 1930, hereinbefore described, at 9h 00m a.m. app.t., set off $34^{\circ}44\frac{1}{2}'N.$, on the lat.arc $10^{\circ}15\frac{1}{2}'S.$, on the decl.arc and determine a meridian with the solar, which agrees with the true meridian.

At app.t., noon with the lat.arc unchanged, observe the sun on the meridian; the resultant reading of the decl. arc is $10^{\circ}13'S.$, which agrees with the computed decl. of the sun.

At 3h 00m p.m., app.t., with the lat.arc unchanged, set off $10^{\circ}10'S.$, on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations taken during the usual hours of solar work, come within 1' of the true meridian it is concluded that the instrument has remained in satisfactory adjustment.

4

All measurements were made on the slope, the vertical angles determined with clinometer or transit, and the slope measurements properly reduced to true horizontal distances for entry in the field notes.

Survey of the East Bdy. of T.16 N., R.10 W.

5

The South bdy. of T.16 N., R.10 W., was surveyed in 1926 by Glenn F. Sawyer U.S.S and Charles E. Hunter U.S.T. who established corners thereon with common reference to areas on both sides of the line. No retracement or resurvey of any part of this line is of record.

The following notes describe a survey of the E. and N. bdys, and subdivisional lines of T.16 N., R.10 W.

From the cor. of Ts.15 and 16 N., Rs.9 and 10 W., which is an iron post, 3 ins. diam., projecting 10 ins. above a mound of stone, firmly set, and properly marked ~~in brass cap, unwitnessed.~~

North, bet. secs. 31 and 36.

Over mountainous land, through scattering undergrowth. Desc. 1 $\frac{1}{4}$ ft. along W. slope.

40.00 Set an iron post, 3 ft. long, 1 in. diam., 8 ins. in the ground to bedrock, deposit a stone marked with a cross (X) at base of post, supported in a mound of stone, for $\frac{1}{4}$ sec. cor. of secs. 31 and 36, with brass cap marked

$\frac{1}{4}$

S36 | S31.

1930

No bearing trees available.

Desc. 54 ft. along W. slope.

Ravine, course SW.; asc. 402 ft. over SW. slope.

Set an iron post, 3 ft. long, 2 ins. diam., 26 ins. in the ground, for cor. of secs. 25, 30, 31 and 36, with brass cap marked

General Description

The larger part of the township is rolling land, known as Goodwin Mesa, a late volcanic formation, the soil of which is adobe and too rocky for cultivation. It subsists only a moderate amount of undergrowth and grass. About one and one half miles in width along the East side of the township is lower in elevation and of more rugged topography, with the older geologic formations exposed over considerable areas. Francis Creek, a seasonal stream of considerable size, enters the NE. corner of sec. 2, is joined by Spencer Creek near the N. side of sec. 1, and runs SouthEasterly through secs. 1 and 12. Burro Creek, a larger and more permanent stream, touches the East boundary of sec. 13, re-enters the township in sec. 24 and flows Southerly through secs. 24, 25 and 36. There is some cultivable soil, a sandy loam, adjoining Burro Creek, also some cottonwood and sycamore trees. Portions of this vicinity are covered with a dense growth of catclaw and palo Cristo. Salt Creek, which bounds Goodwin Mesa on the SouthWest, runs SouthEasterly through secs. 30, 31 and 32. A spring was noted in sec. 32 near its North $\frac{1}{4}$ sec. cor. At scattering points on Goodwin Mesa are several dams, reservoirs and corrals, used in stock-raising, the only present activity in the township. There are no permanent residents. There has been a small amount of mineral development in secs. 1 and 2. The vicinity is known as the Eureka Mining District. A patented mill-site claim lies across the line bet. those two secs. The Mohave-Yavapai County Boundary line extends N. and S. through about the middle of the N. half of secs. 5, 8, 17, 20, 29 and 32, with Mohave County on the N. and Yavapai County on the East. This county boundary is monumented at one-mile intervals. There are no roads in the township. It is reached by trail, only, from the Kingman-Phoenix cut-off highway.
