FIELD NOTES

OF THE SURVEY OF THE

East Boundary

West Boundary

North Boundary

and

Subdivision Lines of

Township 15 North, Range 8 West

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

William E. Hiester U.S. Surveyor

and

Charles E. Hunter U.S. Transitman

In the capacity of U. S. Surveyor, under Special Instructions dated June 24, 1929, issued by the District Cadastral Engineer to govern surveys included in Group No. 159 Arizona, which were approved by the Commissioner of the General Land Office, July 10, 1929, and Assignment Instructions dated Jan. 2, 1930.

Survey commenced February 26, 1930

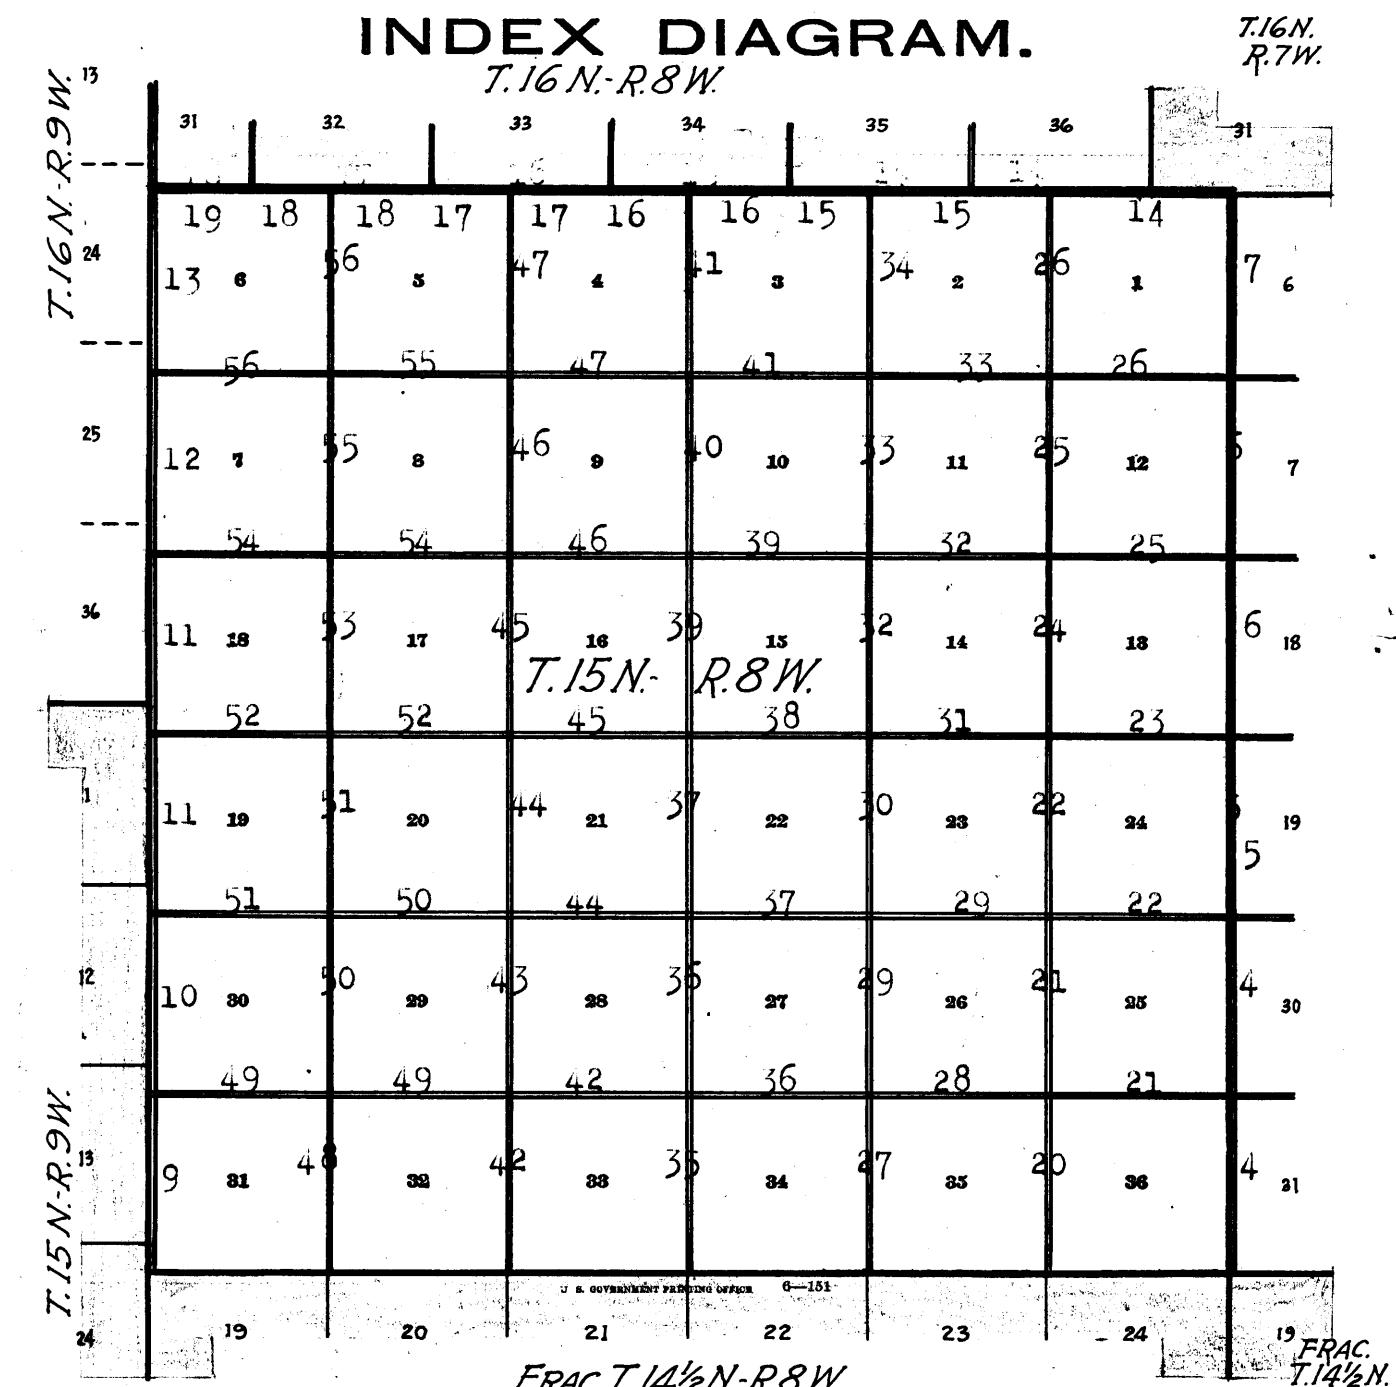

Survey completed April 15, 1930

DATE DIAGRAM
1930

Group 159-----Arizona

Township 15 North, Range 8 West

Dates in green show lines surveyed by William E. Hiester,
U.S. Surveyor, on dates shown thereon in 1950.

Dates in red show lines surveyed by Charles E. Hunter,
U.S.Transitman, on dates shown thereon in 1930.

Survey commenced February 25, 1930, and executed on dates shown on diagram of page 1, hereof, by William E. Hiester, U.S. Surveyor, and Charles E. Hunter, U.S. Transitman, using respectively Buff transit No. 19423 and Young and Sons transit No. 8584.

Both instruments are equipped with improved Smith solar attachment. The horizontal limbs are provided with two double verniers, placed opposite each other reading to single minutes of arc, which is also the least count of the verniers of the vertical circles, latitude and declination arcs.

The instruments were approved subject to the usual field tests by the District Cadastral Engineer for Arizona.

Unless otherwise specified, all azimuths are determined by the solar attachments, and all measurements were made with a steel tape five chains in length, compared with a Lufkin standard steel tape, and found correct.

----- PRELIMINARY TESTS OF INSTRUMENTS -----

Examine the adjustments of the instruments and find no errors; then to test the solar apparatus by comparing their indications resulting from solar observations taken during a.m. and p.m. hours, with a meridian determined by observations on Polaris, proceed as follows:

February 24, 1930, with Buff and Buff transit No. 19423 at my station in the SW. quarter of sec. 27, T. 15 N., R. 8 W., in latitude $34^{\circ}39'N.$, longitude $113^{\circ}05'W.$, at $9^{\text{h}}15^{\text{m}}$ p.m., l.m.t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, by a tack driven in a peg set firmly in the ground 5 chs. N.

Azimuth of Polaris at western elongation is $1^{\circ}17'58''$

February 25, 1930, at same station, lay off the azimuth of Polaris $1^{\circ}18'$ to the east and mark the meridian thus determined by a tack driven in a peg set firmly in the ground 5 chs. N.

At $9^{\text{h}}00^{\text{m}}$ a.m., app.t., set off $34^{\circ}39'N.$, on the latitude arc $9^{\circ}09'S.$ on the declination arc, and determine a meridian with the solar, which is found to agree within 1' of the true meridian.

At app.t., noon with the latitude arc unchanged, observe the sun on the meridian; the resulting reading of the declination arc is $9^{\circ}07'S.$, which agrees with the computed declination of the sun.

At $3^{\text{h}}00^{\text{m}}$ p.m., app.t., with the latitude arc unchanged, set off $9^{\circ}04'S.$ on the declination arc, and determine a meridian with the solar, which is found to agree within 1' of the true meridian.

February 27, 1930, with Young and Sons transit No. 8584 at same station in sec. 27, T. 15 N., R. 8 W., determined February 24, 1930, at $9^{\text{h}}00^{\text{m}}$ a.m., app.t., set off $34^{\circ}39'N$ on the latitude arc, $8^{\circ}25'S.$ on the declination arc, and determine a meridian with the solar, which is found to agree within 1' of the true meridian.

At app.t., noon with the latitude arc unchanged, observe the sun on the meridian; the resulting reading of the declination arc is $8^{\circ}22' S.$, which agrees with the computed declination of the sun.

At $3^{\text{h}} 00^{\text{m}}$ p.m., app.t., with the latitude arc unchanged, set off $8^{\circ}19' S.$ on the declination arc, and determine a meridian with the solar, which is found to read within 1' of the true meridian.

As all of the observations made during the usual hours of solar work come within 1' of the true meridian it is concluded that the adjustments of the instruments are satisfactory.

At intervals throughout the survey the solar instruments were tested on a true meridian, and were maintained in proper adjustment.

FINAL TESTS OF INSTRUMENTS

March, 24, 1930, with Buff and Buff transit, No. 19423 at station in the SW. quarter of sec. 36, T. 16 N., R. 8 W., in latitude $34^{\circ}43' N.$, longitude $113^{\circ}04' W.$, at $7^{\text{h}} 25^{\text{m}}$ p.m., l.m.t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point thus determined, by a tack driven in a peg set firmly in the ground 5 chs. N.

Azimuth of Polaris at western elongation is $1^{\circ}18' 00''$.

April 1, 1930, at same station, lay off the azimuth of Polaris $1^{\circ}18'$ to the east, and mark the meridian thus determined by a tack driven in a peg, set firmly in the ground 5 chs. N.

At $9^{\text{h}} 00^{\text{m}}$ a.m., app.t., set off $34^{\circ}43' N.$ on the latitude arc, $4^{\circ}27' N.$ on the declination arc, and determine a meridian with the solar, which is found to agree within 1' of the true meridian.

At app.t., noon with the latitude arc unchanged, observe the sun on the meridian; the resulting reading of the declination arc is $4^{\circ}30' N.$, which agrees with the computed declination of the sun.

At $3^{\text{h}} 00^{\text{m}}$ p.m., app.t., with the latitude arc unchanged, set off $4^{\circ}33' N.$ on the declination arc, and determine a meridian with the solar, which is found to agree within 1' of the true meridian.

April 20, 1930, with Young and Sons transit, No. 8584 on the meridian established March 24, 1930, hereinbefore described At $9^{\text{h}} 00^{\text{m}}$ a.m., app.t., set off $34^{\circ}43'$ on the latitude arc, $11^{\circ}26' N.$, on the declination arc, and determine a meridian with the solar, which is found to agree with the true meridian.

At app.t., noon with the latitude arc unchanged, observe the sun on the meridian; the resulting reading of the declination arc is $11^{\circ}29' N.$, which agrees with the computed declination of the sun.

At $3^{\text{h}} 00^{\text{m}}$ p.m., app.t., with the latitude arc unchanged, set off $11^{\circ}32' N.$, on the declination arc, and determine a meridian with the solar, which is found to agree within 1' of the true meridian.

Survey of the East Bdy. of T.15 N., R.8 W.

Chains As all of the solar observations taken during the usual hours of solar work, come within 1' of the true meridian it is concluded that the instruments have remained in satisfactory adjustment.

All measurements were made on the slope, the vertical angles determined with clinometer or transit, and the slope measurements properly reduced to true horizontal distances for entry in the field notes.

The cor. of Ts. 14 $\frac{1}{4}$ and 15 N., Rs. 7 and 8 W., is an iron post 3 ins. diam., projecting 26 ins. above ground, supported in a mound of stone, with brass cap marked

Chains

The South 252.40 chs. of the W. bdy. of T.15 N., R.8 W. was surveyed in 1920 by D.R.Averill, U.S. Surveyor, as part of the E. bdy. of T.15 N., R.9 W., establishing thereon sec. and $\frac{1}{4}$ sec. cors. at regular intervals, counting from the SE. cor. of said township, and with reference to areas W. of the line only.

The following notes describe the establishment on such portion of the E.bdy. of T.15 N.,R.9 W. of $\frac{1}{4}$ sec. and sec. cors. alternately at 40-ch. intervals, counting from the SW. cor. of T.15 N., R.8 W., with reference to areas E. of the line only. Said range line is then extended N., establishing $\frac{1}{4}$ sec. and sec. cors. thereon with reference to areas E. of the line only, to an intersection with the N. bdy. of T.15 N., R.8 W., surveyed due West from the NE. cor. of said township.

Topography in the field notes herein, on that portion of the W. bdy. of T.15 N., R.8 W., which is identical in position with part of the E. bdy. of T.15 N., R.9 W., is copied from the record field notes with distances changed to refer to cors. of T.15 N., R.8 W.

From the cor. of Ts. 14 $\frac{1}{2}$ and 15 N., R.8 W., which is an iron post, 3 ins. diam., projecting 8 ins. above a mound of stone, firmly set and properly marked on brass cap, witnessed by a mound of stone E. of cor., North, on true line, along W. bdy. of sec. 31. GENERAL DESCRIPTION.

The land embraced within the east portion of this township is very rough mountainous land; the west portion of the township is rolling mesa land.

The soil in the eastern portion of the township is very rocky, granite formation, the western portion of the township is sandy and clay, covered mostly with malpais stones, which can nearly all be classed as 3rd rate. Scattering cedar and pinyon are found throughout the township.

The land is used for grazing purposes and covered with scattering nutritious grasses, scrub oak, mahogany, yucca, catclaw and cactus.

Bert Headley's goat ranch is located in the west portion of sec. 23 of this township.

Wilder Creek, enters the township near the cor. of secs. 2 and 3, on N.bdy.of the Tp. traverses through the NW. portion of the township, leaving same near the $\frac{1}{4}$ sec. cor. of sec. 7 on the W.bdy.of the township.

Boulder Creek, enters the township near the cor. of secs 1, 6, 7 and 12 on E.bdy.of Tp., traverses through the central part of the township, leaving same near the cor. of secs. 19, 20, 31 and 32 on S.bdy of Tp.

No indications of mineral are found.
