EXECUTED BY

Dupree R. Averill

U.S. Surveyor

In the capacity of U. S. Surveyor, under Special Instructions dated June 17, 1930, issued by the District Cadastral Engineer to govern surveys included in Group No. 163 Arizona, which were approved by the Commissioner of the General Land Office, July 25, 1930, and Assignment Instructions dated September 1, 1930.

Resurvey and Survey commenced October 13, 1930.

Resurvey and Survey completed November 8, 1930.

____ Surveyed } By Dupree R.Averill, U.S. Surveyor,
____ Resurveyed } Notes and dates in Book "C" of this group.

Resurveys and surveys herein described were executed by D.R.Averill, U.S. Surveyor, on dates shown on diagram on page 2 hereof, using a Buff and Buff transit No. 17992 provided with a Smith solar attachment. The horizontal limb is provided with two double verniers placed opposite to each other, and reading to single minutes of arc, which is also the least count of the verniers of the lat. and decl. arcs. Unless otherwise specified all azimuth determinations are accomplished with the solar attachment.

The instrument was examined and approved by the District Cadastral Engineer for Ariz. and Calif. at Phoenix, Ariz., on Sept. 1, 1930, conditional upon satisfactory field tests of same.

PRELIMINARY FIELD TESTS.

October 12, 1930:

Examine the adjustments of the transit and solar apparatus and find them correct, then, to test the solar apparatus by comparing its indications resulting from observations made during a.m. and p.m. hours, with the true meridian established by Polaris observations, proceed as follows:

At camp, in NW. quarter of sec. 8, T. 15 S., R. 16 E., G. & S.R. B. & M., Arizona, latitude $32^{\circ}8\frac{1}{2}'N.$, longitude $110^{\circ}44'W.$, on the meridian established by Polaris observations Oct. 6, 1930 as described in Book "C" of this group.

At 8h. 0m., app. t., set off $32^{\circ}8\frac{1}{2}'N.$ on the lat. arc, $7^{\circ}15'S.$ on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian, and obtain a reading of $7^{\circ}20'S.$ on the decl. arc, which agrees with the computed declination of the sun.

At 4h. 0m., p.m., app. t., with the lat. arc unchanged, set off $7^{\circ}22\frac{1}{2}'S.$ on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations made during the usual hours of solar work define positions for meridians which agree within 1' with the meridian established by Polaris observations, conclude that the instrument is in satisfactory adjustment.

Unless otherwise specified, all measurements herein recorded were obtained by the use of a Lallie steel tape 5 chs. in length, compared with a Lufkin standard steel tape and found correct.

The measurements are made on the slope, vertical angles determined by clinometer, and the slope measurements properly reduced to true horizontal equivalents for entry in the field notes.

Resurvey of Part of the North Bdy. of Township 14 South, Range 16 East

Chains. The West five miles of the North bdy. of T.14 S., R.16 E. were surveyed in 1873 by T.F. White, U.S.D.S., establishing all corners thereon with reference to areas on both sides of the line.

The West four miles of this Tp. bdy. were resurveyed in 1900 by P. Contzen, U.S.D.S., reconstructing the original cor. monuments in their original positions and retaining their original common reference.

No other resurvey or retracement of any part of this Tp. bdy. is of record.

The following notes describe a resurvey of the portion of the line bet. secs. 2 and 35.

Township 14 South, Range 16 East

The continued satisfactory adjustment of the instrument used throughout the surveys described in the foregoing field notes is indicated by the results of the preliminary tests of same described in Book "E" of this group.

GENERAL DESCRIPTION.

The surface of the portion of T.14 S., R.16 E. subdivided as described in the foregoing notes ranges from gently rolling to rough mountainous, at elevations from 2700 to 6300 ft. above sea level.

The land is adapted only for stock grazing purposes.

There is no permanent flowing water. The deeper canyons carry an intermittent flow in the winter season.

A scattered growth of desert verdure predominates in the foothills, the timber varying thru oak to pinon and juniper upon the higher ridges.

The only major development within the Tp. is the Tanque Verde Ranch in the southwest quarter of section 2. Homestead locations are noted in Secs. 2, 11, 14, 21 and 28.

There is no evidence available of the existence of valuable mineral deposits within the area included in this survey.
