FINAL TEST OF SOLAR ATTACHMENT.

June 13, 1931, at camp near the standard cor. of secs. 35 and 36, T. 5 N., R. 22 E., in latitude 33° 46' 33" N., longitude 109° 59' 14" W., at 7h 23m 40s p.m., l.m.t., make an hour angle observation on Polaris, west of the meridian, two each with the telescope in direct and reversed positions, marking the mean point in the line thus determined on a peg driven firmly in the ground 10 chs. N. of station.

June 14, 1931, lay off the azimuth of Polaris 15' 24" to the east, and mark the meridian thus determined, by a tack in a peg driven firmly in the ground 10 chs. N.

At 7h 15m a.m., app. t., set off  $33^{\circ}46\frac{1}{2}'$  N., on the lat. arc;  $23^{\circ}15\frac{1}{2}'$  N., on the decl. arc; and determine a meridian with the solar, which is found to agree with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian; the resulting reading of the decl. arc is  $23^{\circ}15\frac{1}{2}'$  N., which agrees with the computed declination of the sun.

At 4h 20m p.m., app. t., with the lat. arc unchanged, set off  $23^{\circ}16\frac{1}{2}'$  N., on the decl. arc; and determine a meridian with the solar, which is found to agree with the true meridian.

As all of the solar observations during the usual hours of solar work come within 1' of the true meridian, conclude that the adjustments of the instrument has been maintained in satisfactory adjustment.

#### GENERAL DESCRIPTION.

A considerable variety of land and soil is found in T.4½ N., R.23 E. The general elevation of the township is about 5500 ft. above sea level. The north and eastern portions of the township is rough and mountainous. The soil is sandy loam and rocky; 2nd and 4th rates., covered with scattering pine, fir, oak, juniper and pinon, and a heavy growth of scrub oak, mahogany, maple, willow, manzanita and second growth juniper. The southwestern portion of the township is rolling mesa land, The soil is sandy loam and clay covered with volcanic stones, 1st and 4th rates. The timber is scattering pine oak, juniper and pinon, with scattering scrub oak and heavy growth of grass.

Seven Mile Creek, traverses through the township, entering the township near the  $\frac{1}{4}$  sec. cor. of sec. 24 on the E. bdy. of the Tp., and leaving the township near the closing cor. of secs. 15 and 16. There is found along Seven Mile Creek, cottonwood, maple and black walnut. A good road traverses along Seven Mile Creek, from Fort Apache to Bonito Creek. The land within the township is used for grazing purposes. Corn is generally raised on the small tracts of land in secs. 15, 16, 23 and 26, by the Apache Indians.
