## FIELD NOTES

OF THE SURVEY OF THE

South boundary and subdivisional lines

of

Township 36 North, Range 12 West.

Of the Gila and Salt River Meridian,

In the State of Arizona

## EXECUTED BY

Benjamin J. Kinsey, U.S. Surveyor

In the capacity of U. S. Surveyor, under Special Instructions dated June 30, 1931, issued by the District Cadastral Engineer to govern surveys included in Group No. 169, which were approved by the Commissioner of the General Land Office, September 21, 1931, and Assignment Instructions dated July 27, 1932.

Survey commenced September 7, 1932

Survey completed October 6, 1932

6-151

7	6	5	4	3	2

The surveys herein described were executed with Buff and Buff transit No. 167724. The instrument is equipped with the Smith solar and otherwise conforms to the standard requirements of the General Land Office.

September, 7, 1932: at station about 2 chs. southeast of the cor. of secs. 16, 17, 20, and 21, T. 36 N., R. 12 W., G. and S.R. B. and M., Arizona, in latitude  $36^{\circ} 31' N.$ , as determined by observations hereinafter described, and approximate longitude  $113^{\circ} 35' W.$ , examine the adjustments of the instrument and find no errors. To test the workings of the solar apparatus proceed as follows:

At 8h. 34m., p.m., l.m.t., observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, marking the mean point in the line thus determined by a tack set in a stake driven firmly in the ground about 5 chs. North-erly.

Azimuth of Polaris at eastern elongation:  $1^{\circ} 19'$ .

September, 8: lay off the azimuth of Polaris,  $1^{\circ} 19'$  to the west and mark the meridian thus determined with a, tack set in top of a stake about 5 chs. North.

At 9h. 00m., a.m., app. t., set off  $36^{\circ} 31' N.$ , on latitude arc,  $5^{\circ} 37' N.$ , on decl. arc and determine a meridian with the solar which agrees with the true meridian.

At 12h. 00m., app. noon, with lat. arc unchanged, observe the sun on the meridian; the resultant reading of the declination arc is  $5^{\circ} 34' N.$ , which agrees with the computed declination of the sun.

At 3h. 00m., p.m., app. t., with lat. arc unchanged, set off  $5^{\circ} 31' N.$  on the declination arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations taken during the usual hours of solar work agree within 1' of the true meridian, conclude that the instrument is in a satisfactory state of adjustment.

Unless otherwise specified, all measurements are made with a Lallie 5-chain steel tape, compared with a Lufkin standard and found correct; the measurements are made on the slope, the vertical angle determined and the slope measurements properly reduced to true horizontal distances.

September, 10, 1932; in approximate latitude  $36^{\circ} 31' N.$ , and approximate longitude  $113^{\circ} 35' W.$ , make an altitude observation upon the star Sagittarii  $\sigma$  for latitude, observing in direct and reversed positions of the telescope:

Mean observed altitude:  $26^{\circ} 27' 30''$   
Reduced latitude :  $36^{\circ} 30' 40''$   
Mean watch time of obsn.: 8h. 12m. 30s.  
Watch fast of l.m.t. : 43m. 23s.

Star Sagittarii  $\sigma$

Mean observed altitude:  $27^{\circ} 08' 30''$   
Reduced latitude :  $36^{\circ} 30' 18''$   
Mean watch time of obsn.: 8h. 19m. 30s.  
Watch fast of l.m.t. : 43m.. 23s.

	Chains	<p>Mean observed altitude of sun at 12h. 40m. 00s. on September 11, 1932, at same station as above described, Star Sagittarii 5° 32' 30". Mean observed altitude: <math>23^{\circ} 32' 30''</math>. Reduced latitude : <math>36^{\circ} 30' 51''</math>. Watch time of obsn.: 8h. 26m. 39s. Watch fast of l.m.t. : 43m. 23s.</p> <p>Mean of the above obsns.v: <math>36^{\circ} 30' 36''</math> reduced latitude.</p> <p>September, 11, 1932; at same station as above described, make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb, and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb;</p> <p>Mean observed altitude: <math>57^{\circ} 54' 26''</math>. Reduced latitude : <math>36^{\circ} 31' 01''</math>. Mean watch time of observation: 12h. 40m. 00s. Watch fast of l.m.t. : 43m. 23s.</p>

#### Final Test of Buff No. 16,724.

October, 6, 1932, at same station as described on page 1 hereof, examine the adjustments of the transit and find no errors; then test the workings of the solar apparatus as follows:

A 9h. 00m., a.m., app. t., set off  $36^{\circ} 31' N.$ ,  $5^{\circ} 11\frac{1}{2}' S.$ , on the lat. arc, on decl. arc, determine a meridian with the solar which agrees with the true meridian.

## SUBDIVISION of T: 36 N., R. 12 W.

68

## Chains

At 12h. 00m., app. noon, with latitude arc unchanged, observed the sun on the meridian; the resultant reading of the declination arc is  $5^{\circ} 15'$  S., which agrees with the computed declination of the sun.

At 3h. 00m., p.m., with lat. arc unchanged, set off  $5^{\circ} 15\frac{1}{2}'$  S. on the decl. arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations, taken during the usual hours of solar work agree within 1 minute of the true meridian, conclude that the adjustments of the instrument have been maintained during the surveys described in the foregoing notes.

## GENERAL DESCRIPTION.

The lands embraced within the township are rolling and broken in character, ranging from an elevation above sea level from 800 to 1500 ft., the lower lands being located in the extreme southwestern corner, in Hidden Canyon. The drainage of most of the township is easterly, with narrow western stretches draining westerly into Hidden Canyon.

The soil on the slopes is of a poor 3rd. and 4th. rate quality with an average depth of one foot to bedrock. The soil in the larger draw bottoms is a sandy, black loam of 3rd. rate quality and usually has a depth of several feet to bedrock.

The timber consists of cedar and pinon with a merchantable value as wood and fence posts only.

No evidence of mineral was noted.

A small spring of water was noted in section 31, this being the only living water found. In sec. 31 is located a pumping plant owned by Preston Nutter but not in operation at the time of survey. Constructed reservoirs were found in secs. 20 and 9, in the latter section is a house belonging to the applicant for survey-E. Englestead.

No other settlers reside in the township.

The lands are especially adapted to grazing and are being so used.

The roads within the township are in poor shape but are being used for automobile travel, the main road from Wolfhole, Arizona to settlements to the south crossing the township from N. to S.

## CERTIFICATE OF UNITED STATES SURVEYOR

ECCO 1934

I, Benjamin J. Kinsey, U.S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the District Cadastral Engineer for Arizona bearing date of the 30th day of June, 1931, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed the South boundary and subdivisional lines of Township 36 North, Range 12 West,

of the Gila and Salt River Meridian, in the State of Arizona, which are represented in the foregoing field notes as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the District Cadastral Engineer for and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

*Benjamin J. Kinsey*  
U.S. Surveyor

*Phoenix, Ariz. Sept. 1, 1934.*

## APPROVAL

OFFICE OF U. S. SUPERVISOR OF SURVEYS,

Denver, Colorado, September 10, 1934.

The foregoing field notes of the survey of the South boundary and subdivisional lines of Township 36 North, Range 12 West, of the Gila and Salt River Meridian, in the State of Arizona,

executed by Benjamin J. Kinsey, U.S. Surveyor,

under his special instructions dated June 30, 1931, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

*A. H. Johnson*  
U. S. Supervisor of Surveys.

I certify that the foregoing transcript of the field notes of the above-described surveys in \_\_\_\_\_, has been correctly copied from the original notes on file in this office.

U. S. Supervisor of Surveys.
