FIELD NOTES

OF THE SURVEY OF THE

NORTH BOUNDARY,

RESURVEY OF A PART OF THE SOUTH BOUNDARY,

AND SURVEY OF THE SUBDIVISIONAL LINES OF

TOWNSHIP 11 NORTH,

RANGE 12 EAST

Of the GILA AND SALT RIVER Meridian,

In the State of ARIZONA

EXECUTED BY

Albinus N. Kimmell and Emil Voigt, U.S.Cadastral Engineers, and

Charles E. Hunter, Robert H. Fischer and Bert E. Wakeman,

U.S. Transitmen

In the capacity of U. S. Surveyors, under Special Instructions dated March 20,

1934, issued by the District Cadastral Engineer to govern surveys included in Group

No. 189, which were approved by the Commissioner of the General Land

Office, April 6 34 June 18 and July 19, 1934
and Assignment Instructions dated June 29 1935.

Survey commenced August 14, 1934

Survey completed August 5, 1935

GOVERNMENT PRINTING OFFICE

NORTH BOUNDARY OF T. 11 N., R. 12 E.

The surveys and resurveys hereinafter described were executed with light mountain solar transits and a solar compass, constructed in accordance with the standard specifications of the General Land Office; Buff and Buff Serial No. 17994 used by Emil Voigt, U.S.C.E.; Young and Sons Serial No. 8487 used by Robert H. Fischer, U.S.Transitman; Young and Sons Serial No. 8394, used by Bert E. Wakeman, U.S.Transitman; Gurley Serial No. 20120, used by Charles E.Hunter, U.S.Transitman; Buff Serial No. 18002 and Young and Sons solar compass No. 6808, used by Albinus N.Kimmell, U.S.Cadastral Engineer. The instruments all have horizontal circles, each with two double opposite verniers reading to single minutes, and the solar transits all have full vertical circles, each with one double vernier reading to single minutes. The transits are equipped with improved Smith type solar attachments with lat. and decl arcs, each with verniers reading to single minutes. The instruments were in good condition and having been placed in satisfactory adjustment prior to beginning the survey were approved by the District Cadastral Engineer June 18 and July 19, 1934, and June 19, 1935. All instrumental adjustments were examined and found to be correct before making the field tests hereinafter recorded.

The direction of the lines was determined with the solar. Measurements were made on the slope with Lallie and Lufkin steel tapes, 5 chs. in length, graduated every link for the first 100 lks. and the balance at intervals of 10 lks.. The tapes were tested by comparison with a Lufkin standard and found correct. The vertical angle of each slope measurement was determined by a clinometer in good adjustment; the field notes show the horizontal equivalent.

The data furnished with the special instructions gives the geographic position of the SE. cor. of the Tp. as; longitude $111^{\circ}01'55''$ W.; latitude $34^{\circ}17'01''$ N.

Test of Instruments in 1934.

August 18, at camp at Indian Gardens $\frac{3}{4}$ of a mile north of the $\frac{1}{4}$ sec. cor., bet. secs. 21 and 28, T. 11 N., R. 12 E., using instrument No. 17994, observe Polaris at eastern elongation at 9h 57m p.m., l.m.t., making two observations each with the telescope in direct and reversed positions and mark and check the line with and on a stake driven firmly in the ground about 5 chs. N. August 19, at 7.30 a.m., lay off the azimuth of Polaris, $1^{\circ}16'22''$ to the west and mark the meridian thus determined with a stake 5 chs. N., then in order to verify the latitude of this station, make a meridian altitude observation of the sun, observing the altitude of the sun's lower limb with the telescope in direct position reversing the transit and observing the sun's upper limb;

Apparent time of observation, noon -- 12h 00m 05s
Mean observed altitude $68^{\circ}29'$

Field record

Observed alt. lower limb	$68^{\circ}14'$
Observed alt. upper limb	$68^{\circ}44'$
Mean observed altitude	$68^{\circ}29'$
Refraction	22"
Parallax	03"
	$68^{\circ}28'41''$
Setting	$90^{\circ}00'00''$
Declination	$12^{\circ}49'14''$ N

North Boundary of T. 11 N., R. 12 E.

h

102°49'14"
68°28'41"
34°20'33"

August 20, at the same station, verify the above observation for latitude, observing the altitude of the sun's lower limb with the telescope in direct position, reversing the transit and observing the sun's upper limb;

Apparent time of obseravtion, noon 12h00m08s
Mean observed altitude 68°09'30"

Field record

Observed altitude lower limb	67°55'
Observed altitude upper limb	68°24'
Mean observed altitude	68°09'30"
Refraction	23"
Parallax	03"
h	68°09'10"
Setting	90°00'00"
Declination	12°29'36" N
	102°29'36"
h	68°09'10"
	34°20'26"
Latitude from 1st observation	34°20'33"
Latitude from 2nd observation	34°20'26"
Mean	34°20'29"

August 21, with instruments 17994, 8487 and 8394, we make simultaneous observations as follows:
at 9h 0m a.m., app. t., set off 34°20½'N. on the lat. arcs.
12°13'N. on the decl. arcs, and determine a meridian with
the solars which is found to agree with the true meridian
established by Polaris observation.

At apparent noon, with the lat. arcs. unchanged, observe
the sun on the meridian; the resulting reading of the
desl. is 12°10' N., which agrees with the computed decl.
of the sun.

At 3h 0m p.m., app. t., with the lat. arcs unchanged, set
off 12°08' N. on the decl. arcs and again determine a
meridian with the solars which agrees with the true
meridian.

As all of the solar observations during the usual hours of
solar work come within 1'30" of the true meridian, the
adjustments of the instruments are satisfactory.

Due to the rugged nature of the Mogollon Rim with its
precipitous cliffs and canyons it was necessary to trian-
gulate in several instances.

Mean magnetic declination is 14°15'E.

Test of instruments in 1935.

July 3, 1935, at camp at Indian Gardens in sec. 21, T.
11 N., R. 12 E., with Buff solar transit No. 18002, in
lat. 34°20½'N., and longitude 111½°W., at 7h 07m p.m.,
l.m.t., make an hour angle observation on Polaris east
of the meridian, making four observations, two each with

North Boundary of T. 11 N., R. 12 E.

4004

Chains

the telescope in direct and reversed positions, and mark the mean point in the line thus determined, by a nail in a stake 3 chs. N.

July 4, lay off the azimuth of Polaris $0^{\circ}04'$ to the west, and mark the meridian thus determined by a nail in a peg about 3 chs. N.; at 8h 00m a.m., app. t., with Buff solar transit No. 18002, Gurley solar transit No. 20120, and Young and Sons solar compass No. 6808 on the meridian obtained by the Polaris observation, test the solars; set the lat. arcs at $34^{\circ} 20\frac{1}{2}'$ N.; the decl. arcs at $22^{\circ} 56\frac{1}{2}'$ N. and observe the sun; the resulting orientation of the instruments when compared with the meridian determined by the Polaris observation has a maximum variation of less than 1'. Every 30 minutes thereafter during the hours 8 to 11.30 a.m., and 12.30 to 5 p.m., proper settings are made on the decl. arcs, the lat. arcs remain unchanged.

The resulting orientations of the instruments have a maximum error of less than $1'30''$ when compared with the true meridian.

The tests of the arcs are frequently made and the meridional indications verified frequently throughout the progress of the survey and the instruments kept in good adjustment at all times.

From the cor. of Tps. 11 and 12 N., Rs. 12 and 13 E., described in the field notes of the survey and resurvey of the boundaries of T. 11 N., R. 13 E., under this group,

West, on a random line, setting temp. $\frac{1}{4}$ sec. and sec.cors. at intervals of 40.00 chs. along the line bet. Tps. 11 and 12 N., R. 12 E. At 475.71 chs., the parallel intersects a N. and S. line, 69 lks. S. of the cor. of Tps. 11 and 12 N., R. 12 E., the cor. of T. 12 N., R. 11 E., and the cor. of T. $11\frac{1}{2}$ N., R. $11\frac{1}{2}$ E. This township corner, which is also Forest Reserve boundary post No. 29, is an iron post, well set, mkd. and witnessed as described in the official record.

The correction is 11.6 lks. N. per mile, counting from the point of beginning.

Thence

S. $89^{\circ} 55'$ E., on true line bet. secs. 6 and 31.

Over mountainous land, through heavy timber and dense undergrowth; descend 215 ft.

Final Test of Instruments.

Prior to completion of the field work on T. 11 N., R. 12 E., both in 1934 and 1935, all solar attachments of the instruments used were tested on the meridian established by Polaris at camp in Indian Gardens in sec. 21, and found to agree within $1\frac{1}{2}'$ in the indications of the solar.

GENERAL DESCRIPTION.

A considerable variety of land and soil are found in the township. The general elevation varies from 5000 to 8000 ft in the eastern half of the township with the western approximating 6000 to 7000 ft. The lowest point is at the Tonto Creek crossing of the S. bdy. in sec. 34, and the highest at Promontory Butte in section 12.

Most of the township is rough and mountainous, with clay and stone predominating, while there are several tracts of sand and silt loam susceptible of cultivation along the stream beds and on benches. Nearly all the township is

SUBDIVISION OF T. 11 N., R. 12 E.

Chains

heavily timbered, mainly of a scrub variety, though there are some fairly desirable tracts of commercial timber. The timber is mainly pine, oak and juniper. The land is generally covered with dense undergrowth of manzanita, catclaw and oak.

Tonto Creek, with its main tributaries, Horton Creek and See Canon Creek, drain the township. The water in these creeks is fed by springs and is good clear water, and provides excellent summer camp facilities.

The principal development is in secs. 16 and 21, where extensive camp grounds have been cleared and built up. There are 3 different Scout camps, a public recreational park, and a Forest Service camp which are connected by a graded road and telephone service with Payson, Arizona on the West and Young, to the East.

There is a small sawmill in sec. 39 providing facilities for local building.

A small store and gasoline station is maintained at the Kohl ranch in sec. 21.

There are settlers in secs. 4, 19, 9, 16, 21, 26, 32 and 34, nearly all having some land under cultivation and producing crops of corn, wheat, and vegetables. The Kohl ranch in sec. 21 and the Haught ranch in sec. 4, have old bearing orchards of apples and peaches.

On the Haught ranch, but just N. of the N. bdy. of sec. 4, under the Tonto Rim, is Zane Grey's lodge, a noted land mark, now abandoned and falling to ruin.

The Tonto Rim is a high stone precipice around the head of Tonto Creek and is part of the Mogollon Rim, which divides the waters of the Salt River and the Little Colorado.

There are some prehistoric ruins to be found along the South Boundary of the Tp.

No minerals were noted.

The main value of the township lies in its recreational facilities and advantages over any of the surrounding territory.

CERTIFICATE OF UNITED STATES SURVEYOR

We, Albinus N. Kimmell and Emil Voigt, U.S.Cadastral Engineers and Charles E. Hunter, Robert H. Fischer and Bert E. Wakeman, U.S.Transitmen, hereby certify upon honor that, in pursuance

of special instructions received from the District Cadastral Engineer for Arizona

bearing date of the 20th day of March, 1934, we have well, faithfully, and truly in our own proper persons and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all these parts or portions of the North boundary, resurveyed a part of the South boundary, and surveyed the subdivisional lines of Township 11 North, Range 12 East.

of the Gila and Salt River Meridian, in the State of Arizona, which are represented in the foregoing field notes as having been executed by us, and under our direction; and that all the corners of and resurvey said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the District Cadastral Engineer for Arizona

and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey and resurvey.

APPROVAL

T. S. P. R. 20 W. April 5, 1936
OFFICE OF U. S. SUPERVISOR OF SURVEYS,

Denver, Colorado, June 15, 1936.

The foregoing field notes of the survey of the North boundary, the resurvey of a part of the South boundary, and the survey of the subdivisional lines of Township 11 North, Range 12 East, Gila and Salt River Meridian, Arizona

executed by Albinus N. Kimmell and Emil Voigt, U.S.Cadastral Engineers and Charles E. Hunter, Robert H. Fischer and Bert E. Wakeman, U.S.Transitmen executed by their under his special instructions dated March 20, 1934, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

U. S. Supervisor of Surveys.

I certify that the foregoing transcript of the field notes of the above described surveys in _____, has been correctly copied from the original notes on file in this office.

U. S. Supervisor of Surveys.
