- Retracement of Mineral Survey No. 1142, Ophir Lode----- 76  
Retracement of Mineral Survey No. 1144, U.S. Grant Lode-- 77  
Retracement of Mineral Survey No. 1143, Sunrise Lode----- 78

T. 5 N., R. 10 W.

The surveys and resurveys herein described were executed with Gurley solar transit No. 371535, used by G. Marvin Litz, Junior Cadastral Engineer; Buff solar transit No. 16730, used by Bert E. Wakeman, Senior Engineering Aide; Buff solar transit No. 16724, used by Ty White, Assistant Cadastral Engineer; Buff solar transit No. 9984, used by Claude F. Warner, Assistant Cadastral Engineer; and Buff solar No. 9223, used by F. Wayne Forrest, Assistant Cadastral Engineer. The instruments were in good condition, having been placed in satisfactory adjustment prior to the beginning of the survey and tested and found free from appreciable error, were approved by the District Cadastral Engineer, conditional upon satisfactory field tests, on the following dates: December 22, 1941, January 16, 1942, February 1, 1943, and February 15, 1943.

The directions of the lines were determined by the solar transit method. The measurements were made with Lallie steel tapes, 5 chs. in length, graduated every link for the first 100 links and the balance at intervals of 10 links. The tapes were tested by comparison with a Lufkin standard and found correct. The measurements were made on the slope and the vertical angle of each interval was ascertained with clinometers in good adjustment; the horizontal equivalents are entered in the field note record.

The data furnished with the special instructions give the geographic position of the SE. cor. of T. 5 N., R. 10 W. as: latitude  $33^{\circ} 43' 29''$  N., and longitude  $113^{\circ} 14' 15''$  W.

-----  
March 15, 1942, in camp in the SE.  $\frac{1}{4}$  of sec. 32, T. 5 N., R. 11 W., latitude  $33^{\circ} 43' 29''$  N., longitude  $113^{\circ} 24' 42''$  W., I observe Polaris at eastern elongation, at 8h 8.8m a.m., l.m.t., making two observations each with the telescope in direct and reversed positions, and place a tack at the mean point on a peg, driven firmly in the ground, about 10 chs. to the N. I then turn off the azimuth of Polaris,  $1^{\circ} 12' 47''$  to the west, and mark the meridian thus determined by a tack on a peg, driven firmly in the ground, about 10 chs. to the north.

At regular intervals throughout the remainder of the day we make the proper settings on the arcs of the solar attachments of Gurley solar transit No. 371535, and Buff solar transit No. 16730, and ascertain that the result-orientation of the instruments, when compared with the meridian established by Polaris observation, has a maximum error of less than  $1' 30''$ .

We repeat the tests of the arcs daily by noon obser-vations and verify the meridional indications at frequent intervals throughout the survey.

-----  
February 10, 1943, in camp in sec. 2, T. 4 N., R. 10 W., latitude  $33^{\circ} 43'$  N., and longitude  $113^{\circ} 15'$  W., I make an hour angle observation on Polaris, west of the meridian, making two observations each with the telescope in direct and reversed positions, reading the horizontal deflection angles from the W. edge of a giant cactus about 60 chs. to the north.

T. 5 N., R. 10 W.

Chains Local mean time of observation-----5h 38.3m p.m.  
 Mean horizontal angle-Polaris to cactus----- $0^{\circ} 26' 50''$  rt.  
 Azimuth of Polaris----- $0^{\circ} 23' 36''$  W.  
 Bearing of W. edge of cactus---N.  $0^{\circ} 03' 14''$  E.

February 11, 1943, at the same station, we make the proper settings on the arcs of Buff solar transits Nos. 16724 & 9984, and ascertain that the resulting orientation of the instruments, when compared with the meridian established by Polaris observation, has a maximum error of less than  $1' 30''$ .

We repeat the tests of the arcs daily by noon observations and verify the meridional indications at frequent intervals throughout the survey.

February 18, 1943, in camp in sec. 2, T. 4 N., R. 10 W., I make the proper settings on the arcs of the solar attachment of Buff solar transit No. 9223, and ascertain that the resulting orientation of the instrument, when compared with the meridian established by Polaris observation, has a maximum error of less than  $1' 30''$ .

I repeat the tests of the arcs daily by noon observations and verify the meridional indications at frequent intervals throughout the survey.

Independent Resurvey of the 1st Stan. Par. N.,  
 Thru R. 10 W.

Independent resurvey, superseding the survey executed by J. F. Hesse, Deputy Surveyor, in 1908.

From the angle point, formerly the stan.  $\frac{1}{4}$  sec. cor. on the S. bdy. of sec. 31, T. 5 N., R. 10 W., described in the field notes of the 1st Stan. Par. N., thru R. 11 W., resurveyed under this group.

East, on true line, along the S. bdy. of sec. 31.

Over rolling desert land, thru scattering timber & under-growth.

- 12.50 Wash, 20 lks. wide, course SW.
- 18.50 Wash, 30 lks. wide, course SW.; asc. 55 ft.
- 23.20 Top of knoll, slopes S., about 5 chs. dist., and N., about 2 chs. dist.; desc. 50 ft. over an E. slope.
- 28.35 The closing cor. of Ts. 4 N., Rs. 10 & 11 W.; an iron post, 3 ins. diam., set, mkd., & witnessed as described in the official record.
- 34.42 An iron post, 3 ins. diam., 3 ft. above a mound of stone, 3 ft. base,  $1\frac{1}{2}$  ft. high, with brass cap mkd.

Final Tests of Solar Attachments.

May 30, 1942, bet. the hours of 7:30 to 10:30 a.m., and 1:30 to 4:30 p.m., we make the proper settings on the arcs of the solar attachments of Gurley solar transit 371535 & Buff solar transit No. 16730, and ascertain that the resulting orientation of the instruments, when compared with the meridian established by Polaris observation on March 15, 1942, has a maximum error of less than 1' 30".

February 17, 1943, bet. the hours of 7:30 to 10:30 a.m., and 1:30 to 4:30 p.m., we make the proper settings on the arcs of the solar attachments of Buff solar transits Nos. 16724 & 9984, and ascertain that the resulting orientation of the instruments, when compared with the meridian established by Polaris observation on Feb. 10, 1943, has a maximum error of less than 1' 30".

April 18, 1943, bet. the hours of 7:30 to 10:30 a.m., and 1:30 to 4:30 p.m., I make the proper settings on the arcs of the solar attachment of Buff solar transit No. 9223, and ascertain that the resulting orientation of the instrument, when compared with the meridian established by Polaris observation on Feb. 10, 1943, has a maximum error of less than 1' 30".

General Description.

The land in the Tp. varies from rolling & broken hills in the southern & eastern portions to the rough mountainous slopes of the Harquahala Mountains in the NW. The elevation ranges from about 1600 ft. in the southern part to about 5700 ft. above sea level in the NW. The soil is sandy, gravelly, & rocky, 2nd to 4th rate.

Drainage of the Tp. is generally southeasterly. Three small springs of water were noted; one each in secs. 1, 5, & 15.

A scattering growth of palo verde & ironwood timber is found almost throughout the Tp., and some mesquite along the larger washes in the less mountainous regions. The undergrowth is greasewood, cacti, ocotillo, catclaw, & rabbit brush.

Cattle grazing is the principal industry; several cattle were on the land at the time of the survey.

There are three patented mineral claims in secs. 11 & 14, and evidence of mineral activity in several other parts of the Tp. There was no mining in progress at the time of the survey.

A partially improved road crosses the SE. cor. of the Tp. from Aguila, about 15 miles to the NE. to the Salome-Buckeye Road, about 15 miles to the south. There are several unimproved desert roads in all but the NW. portion.

The average of a considerable number of readings over all parts of the township gives a value of 15° E. for the mean magnetic declination.

CERTIFICATE OF SURVEYOR

We, Ty White, Claude F. Warner, and F. Wayne Forrest,  
Assistant Cadastral Engineers; G. Marvin Litz,  
Junior Cadastral Engineer, and Bert E. Wakeman,  
Senior Engineering Aide, hereby certify upon honor that, in

pursuance of special instructions bearing date of the 29th day of October 1941,

received from the district cadastral engineer for Arizona, with assignment  
12/22/41, 1/16/42, we

instructions dated 2/1/43, & 2/15/43, have surveyed independently resurveyed the  
First Standard Parallel North thru Range 9 West, and a portion of Range  
10 West, and the East boundary of Township 5 North, Range 10 West, and  
surveyed the subdivisional lines of Township 5 North, Range 10 West

of the Gila & Salt River Meridian, in the State of Arizona, which are

represented in the foregoing field notes as having been executed by us and under our direction; and that said  
resurveys and survey has been made in strict conformity with said instructions, the Manual of Instructions for the Survey

of the Public Lands of the United States, and in the specific manner described in the foregoing field notes.

CERTIFICATE OF APPROVAL

OFFICE OF SUPERVISOR OF SURVEYS,

Denver, Colorado, April 16, 1945.

The foregoing field notes of the survey of independent resurvey of the First Standard Parallel North thru Range 9 West, and a portion of Range 10 West, and the East boundary of Township 5 North, Range 10 West, and the survey of the subdivisional lines of Township 5 North, Range 10 West.

Ty White, Claude F. Warner, and F. Wayne Forrest, Assistant Cadastral Engineers; and G. Marvin Litz, Junior Cadastral Engineer, and Bert E. Wakeman, Senior Engineering Aide.

under special instructions dated October 29, 1941, and assignment

instructions dated 12/22/41, 1/16/42, 2/1/43, & 2/15/43, having been critically examined, and resurveys and the necessary corrections made prior to their certification by the engineer, the said field notes, and the survey therein described, are hereby approved.

  
Supervisor of Surveys.

CERTIFICATE OF TRANSCRIPT

I CERTIFY that the foregoing transcript of the field notes of the above described surveys in \_\_\_\_\_  
is a true copy of the original field notes on file in the public survey office.
